Module Content

What is an Alternative Assessment?

Assessment is generally defined as the process of gathering quantitative and/or qualitative data for the purpose of making decisions, whereas **assessment of learning** can be defined as the systematic and purpose-oriented collection, analysis and interpretation of evidence of student learning in order to make informed decisions relevant to the learners. In contrast, **assessment for learning** refers to the use of assessment to identify the needs of the students in order to modify instruction or the learning activities in the classroom. Assessment for learning is formative in nature, and it is meant to identify gaps in the learning experiences of the students, so they can be assisted in achieving the curriculum outcomes.

In most practice, most teachers use traditional assessment methods to assess and evaluate the learning of students in the classroom. **Traditional assessment** refers to the use of traditional assessment strategies or tools to provide information on student learning. Typically, objective (e.g. multiple choice) and subjective (e.g. essay) paper-and-pencil tests are used to assess students. Traditional assessments are often used as basis for evaluating and grading students. They are more commonly used in the classrooms because they are easier to design and quicker to be scored.

In contrast, **alternative assessment** refers to the use of alternative or non-traditional assessment strategies or tools to collect information on student learning. Examples of alternative forms of assessment are performance-oriented and product-oriented assessment methods. At the core of alternative assessment is the need to design and implement assessment tasks or activities that refrain from using traditional paper-and-pencil tests, which typically assess cognitive learning outcomes and thus have right and wrong answers. The following are features of alternative assessment (Silvestre-Tipay, 2009, p.58):

1. Assessment is based on authentic tasks that demonstrate learner's ability to accomplish communication goals.
2. Instructor and learners focus on communication, not on right and wrong answers.
3. Learners help to set the criteria for successful completion of communication tasks
4. Learners have the opportunities to assess themselves and their peers.

While the practice of assessing learning using traditional methods like paper-and-pencil tests is still common in many classrooms, there is an emerging trend toward the use of alternative assessment or assessment using non-traditional methods, which in theory and practice can capture
