Water Development And Poverty Reduction Natural Resource Management And Policy:

Water Development and Poverty Reduction I.H. Olcay Ünver, Rajiv K. Gupta, Aysegul Kibaroglu, 2012-12-06 In the book's four Parts the interdisciplinary approach to many issues contributes to the relationship between water and poverty. Part I includes articles on the conceptual and methodological issues concerning poverty reduction through water resources development. It also offers analysis of quantitative measurements of poverty reduction including some approaches for creating a Water Poverty Index. Part II considers the institutional frameworks for management of water and poverty reduction. Topics range from community based decision making to international leadership. Part III encompasses discussions on participatory irrigation management and the privatization of urban water supplies and sewerage and the link to poverty. Case studies from India, Turkey and Jordan make up Part IV. The studies present diverse water management and development practices for poverty reduction including realistic pricing and effective irrigation practices, the use of water as an engine for sustainable development, small and large scale strategies for reducing the risks and uncertainties in water availability and food security, the economic value of improved water supplies and the positive impact of small scale development projects.

Frontiers in Water Resource Economics

Renan-Ulrich Goetz, Dolores Berga, 2006-03-09 Most of the books published previously in the field of water resource economics focus on particular aspects of water economics such as institutions, pricing or water markets but none of them have given particular attention to methodological questions. However, the applied methodology within economic research has made some remarkable advances over the last 10-20 years. Some of these advances are of particular interest to the field of water economics. Therefore we think that a book that focusing on methodological advances within the field of water resource economics and showing how these advances can be applied in economic analysis of water issues makes a nice complement to the existing literature in this field. We identified five areas where we consider the methodological advances to be of particular importance: 1 asymmetric information and game theory, 2 uncertainty, 3 space, 4 water quality and 5 production and technology adoption. The selected papers for the book fall entirely within these categories. The book *Frontiers in Water Resource Economics* draws to a great extent on papers which were presented at the 7th Conference of the International Water and Resource Economics Consortium, June 3-5 2001 held in Girona, Catalonia, Spain. This conference was jointly organized with the 4th Conference of Environmental and Resource Economics by the Department of Economics, University of Girona.
