Suzuki,Dinggang Shen,2010-09-10 The first International Workshop on Machine Learning in Medical Imaging MLMI 2010 was held at the China National Convention Center Beijing China on Sept ber 20 2010 in conjunction with the International Conference on Medical Image Computing and Computer Assisted Intervention MICCAI 2010 Machine learning plays an essential role in the medical imaging field including image segmentation image registration computer aided diagnosis image fusion ima guided therapy image annotation and image database retrieval With advances in me cal imaging new imaging modalities and methodologies such as cone beam multi slice CT 3D Ultrasound tomosynthesis diffusion weighted MRI electrical impedance to graphy and diffuse optical tomography new machine learning algorithms applications are demanded in the medical imaging field Single sample evidence provided by the patient s imaging data is often not sufficient to provide satisfactory performance the fore tasks in medical imaging require learning from examples to simulate a physician s prior knowledge of the data The MLMI 2010 is the first workshop on this topic The workshop focuses on major trends and challenges in this area and works to identify new techniques and their use in medical imaging Our goal is to help advance the scientific research within the broad field of medical imaging and machine learning The range and level of submission for this year s meeting was of very high quality Authors were asked to submit full length papers for review A total of 38 papers were submitted to the workshop in response to the call for papers Interventional Magnetic Resonance Imaging Jörg F. Debatin,Gerhard Adam,2012-12-06 One of the most amazing and spectacular developments in modern radiology has been the rapid growth and expansion of so called interventional radiology which can also be described as minimally invasive therapy guided by radiological imaging Many applications of this method are now widely in use in different organs particularly in the vascular system Everybody is well aware of the shortcomings and drawbacks of the radiological modalities currently used for guiding minimally invasive procedures Ultrasound although it has the advantage of being absolutely harmless to the patient and the operator cannot be used for many procedures because it does not provide the precise anatomical information needed for a safe performance of these procedures Rontgen rays provide superb anatomical insight to guide delicate manipulations inside the human body but as operations tend to become longer and more complicated the radia tion dose for patients as well as for operators is becoming an increasing source of concern It is therefore logical that we should explore the possibilities for interventional radiological procedures provided by the latest imaging modality magnetic resonan ce imaging taking advantage of the specific physical properties of this method and the absence of ionizing radiation It soon became evident that this new approach represents a tremendous challenge involving the development of new hardware and software new catheters and other material that can be used in a magnetic environment etc *PC Mag* ,1993-03-30 PCMag com is a
