Toward More Sustainable Infrastructure Project Evaluation For Planners And Engineers:

Toward More Sustainable Infrastructure Carl D. Martland, 2011-02-22 *Toward More Sustainable Infrastructure Project Evaluation for Planners and Engineers* provides readers a framework for understanding and evaluating infrastructure projects to improve their performance and sustainability taking into account not only the financial and economic issues but also the social and environmental impacts that affect the sustainability of infrastructure Based on a course designed developed by the author over ten years at M I T this text demonstrates how to apply the basic methods of engineering economics in evaluating major infrastructure projects and also demonstrates how these same techniques can be useful with many routine business and personal decisions It introduces students to project management system performance concepts of sustainability methods of engineering economics and provides numerous case studies examples and exercises based upon real world problems This text fills a void in the education of many planners and engineering students namely an understanding of why major infrastructure projects are undertaken how they are structured and evaluated and how they are financed *Toward More Sustainable Infrastructure Project Evaluation for Planners and Engineers* prepares readers to evaluate projects based upon an appreciation of the needs of society the potential for sustainable development and recognition of the problems that may result from poorly conceived or poorly implemented projects and programs

Planning and Design of Engineering Systems Graeme Dandy, David Walker, Trevor Daniell, Robert Warner, Bernadette Foley, 2017-12-06 This newly updated book offers a comprehensive introduction to the scope and nature of engineering work taking a rigorous but common sense approach to the solution of engineering problems The text follows the planning modelling and design phases of engineering projects through to implementation or construction explaining the conceptual framework for undertaking projects and then providing a range of techniques and tools for solutions It focuses on engineering design and problem solving but also involves economic environmental social and ethical considerations This third edition expands significantly on the economic evaluation of projects and also includes a new section on intractable problems and systems involving a discussion of wicked problems and soft systems methodology as well as the approaches to software development Further developments include an array of additional interest boxes worked examples problems and up to date references Case studies and real world examples are used to illustrate the role of the engineer and especially the methods employed in engineering practice The examples are drawn particularly from the fields of civil and environmental engineering but the approaches and techniques are more widely applicable to other branches of engineering The book is aimed at first year engineering students but contains material to suit more advanced undergraduates It also functions as a professional handbook covering some of the fundamentals of engineering planning and design in detail *Sustainable Construction Technologies* Vivian Y. Tam, Khoa N. Le, 2019-01-03 *Sustainable Construction Technologies Life Cycle Assessment* provides practitioners with a tool to help them select technologies that are financially advantageous even though

they have a higher initial cost Chapters provide an overview of LCA and how it can be used in conjunction with other indicators to manage construction Topics covered include indoor environment quality energy efficiency transport water reuse materials land use and ecology and more The book presents a valuable tool for construction professionals and researchers that want to apply sustainable construction techniques to their projects Practitioners will find the international case studies and discussions of worldwide regulation and standards particularly useful Provides a framework for analyzing sustainable construction technologies and economic viability Introduces key credit criteria for different sustainable construction technologies Covers the most relevant construction areas Includes technologies that can be employed during the process of construction or to the product of the construction process i e buildings Analyzes international rating systems and provides supporting case studies

State of Good Repair Harry S. Cohen, Joseph Barr, 2012 TRB's Transit Cooperative Research Program TCRP Report 157 State of Good Repair Prioritizing the Rehabilitation and Replacement of Existing Capital Assets and Evaluating the Implications for Transit presents a framework that builds upon a set of fundamental concepts and provides a basic set of steps for transit agencies to follow when evaluating and prioritizing capital asset rehabilitation and replacement investments In addition to the printed report an analytical approach and set of spreadsheet tools were developed to support the framework These tools address how to evaluate rehabilitation and replacement actions for specific types of transit assets and how to prioritize candidate rehabilitation and replacement actions Publisher's description

The International Handbook of FRP Composites in Civil Engineering Manoochehr Zoghi, 2013-09-26 The use of high performance fiber reinforced polymer FRP composite materials has expanded beyond the aerospace and marine industries into civil engineering and related disciplines This handbook provides a complete primer on FRP composites including materials manufacturing life cycle costs and mechanics It also focuses on professional applications such as hybrid FRP composite systems composites for reinforcement nondestructive testing and evaluation and design philosophies and guidelines It includes standards of practice from around the world as well as helpful design charts formulas and tables for easy reference
