Location

The oil temperature sensor is located on the small oil pan at the middle front.

The oil temperature sensor detects the current oil temperature and supplies a matching voltage signal to the CDI control unit (NCP).

Design

The oil temperature sensor provides an integral sensing resistor with a negative temperature coefficient (NTC).

Function

Oil level and oil quality are detected on the basis of the experience of the engine oil (deterioration). The oil temperature is detected by the temperature sensor. All the signals are processed in the electronics to form a PWM signal and transmitted to the engine control unit. The data is passed on by the engine control unit over CAN to the instrument cluster and used there to calculate the individual service intervals. Oil top-ups are automatically recognized and extend the service interval. The data can be displayed on the instrument cluster. Overfilling of engine oil, minor damages, overheating of engine oil and too frequent oil change are automatically displayed.
