

## Human Biology Exam 1 Notes

### Organism Structures

#### Cells

- Cell theory:
  - All organisms are made up of cells
  - Cells are the basic unit of life and structure
  - New cells are created from pre-existing cells

Atoms → molecules → macromolecules → organelles → cells → tissue → organ → organ system → organism

| Organelle        | Structure                                                                                                                         | Function                                                                                   |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| Cell membrane    | Semi-fluid phospholipid bilayer embedded with proteins.                                                                           | Boundary between intracellular and extracellular environments                              |
| Cytoplasm        | Thick, jelly-like fluid that contains cytosol as the liquid (which suspends compounds like organelles/enzymes)                    | Suspends cellular organelles, maintains cell shape, and contains vital metabolic reactions |
| Nucleus          | Biggest organelle in cell. Contains most DNA inside the nuclear membrane                                                          | Responsible for regulating cellular activities and holding most genetic material           |
| Nuclear membrane | Wall around nucleus                                                                                                               | Separates environments                                                                     |
| Nuclear pores    | Gaps in nuclear membrane                                                                                                          | Allows movement of materials in and out of nucleus                                         |
| Nucleolus        | Suspended in nucleoplasm and made of RNA (ribonucleic acid)                                                                       | Making and assembling ribosomes                                                            |
| Mitochondrion    | "Jellybean" that contains a double membrane (outer is smooth, inner creates the "wavy-ness"). Has mtDNA (mitochondria DNA) inside | Releases energy through cellular respiration                                               |
| Ribosomes        | Made up of rRNA (ribosomal RNA) that may be found free in cytoplasm or attached to organelles (eg. RER)                           | Joins amino acids together to make proteins                                                |
