Walking Sideways The Remarkable World Of Crabs:

Walking Sideways Judith S. Weis, 2012-10-23 The world's nearly 7 000 species of crabs are immediately recognizable by their claws sideways movement stalked eyes and thick outer shells These common crustaceans are found internationally thriving in various habitats from the edge of the sea to the depths of the ocean in fresh water or on land Despite having the same basic body type as decapod crustaceans true crabs have heavy exoskeletons and ten limbs with front pincer claws crabs come in an enormous variety of shapes and sizes from the near microscopic to the giant Japanese spider crab In *Walking Sideways* Judith S Weis provides an engaging and informative tour of the remarkable world of crabs highlighting their unique biology and natural history She introduces us to recently discovered crabs such as the Yeti crab found in deep sea vents explains what scientists are learning about blue and hermit crabs commonly found at the shore and gives us insight into the lifecycles of the king and Dungeness crabs typically seen only on dinner plates Among the topics Weis covers are the evolution and classification of crabs their habitats unique adaptations to water and land reproduction and development behavior ecology and threats including up to date research Crabs are of special interest to biologists for their communication behaviors sexual dimorphism and use of chemical stimuli and touch receptors and Weis explains the importance of new scientific discoveries In addition to the traditional ten legged crabs the book also treats those that appear eight legged including hermit crabs king crabs and sand crabs Sidebars address topics of special interest such as the relationship of lobsters to crabs and medical uses of compounds derived from horseshoe crabs which aren't really crabs While Weis emphasizes conservation and the threats that crabs face she also addresses the use of crabs as food detailing how crabs are caught and cooked and their commercial value from fisheries and aquaculture She highlights other interactions between crabs and people including keeping hermit crabs as pets or studying marine species in the laboratory and field Reminding us of characters such as *The Little Mermaid*'s Sebastian and *Sherman Lagoon*'s Hawthorne she also surveys the role of crabs in literature for both children and adults film and television as well in mythology and astrology With illustrations that offer delightful visual evidence of crab diversity and their unique behaviors *Walking Sideways* will appeal to anyone who has encountered these fascinating animals on the beach at an aquarium or in the kitchen *Life Sculpted* Anthony J.

Martin, 2023-06-02 There is much to love between this book's covers There are many eureka moments in *Life Sculpted* and some truly beautiful ones Eugenia Bone Wall Street Journal Meet the menagerie of lifeforms that dig crunch bore and otherwise reshape our planet Did you know elephants dig ballroom sized caves alongside volcanoes Or that parrotfish chew coral reefs and poop sandy beaches Or that our planet once hosted a five ton dinosaur crunching alligator cousin In fact almost since its fascinating start life was boring Billions of years ago bacteria algae and fungi began breaking down rocks in oceans a role they still perform today About a half billion years ago animal ancestors began drilling scraping gnawing or breaking rocky seascapes In turn their descendants crunched through the materials of life itself shells wood and bones Today

such bioeroders continue to shape our planet from the bacteria that devour our teeth to the mighty moon snail always hunting for food as evidenced by tiny snail made boreholes in clams and other moon snails There is no better guide to these lifeforms than Anthony J Martin a popular science author paleontologist and co discoverer of the first known burrowing dinosaur Following the crumbs of lichens sponges worms clams snails octopi barnacles sea urchins termites beetles fishes dinosaurs crocodilians birds elephants and of course humans Life Sculpted reveals how bioerosion expanded with the tree of life becoming an essential part of how ecosystems function while reshaping the face of our planet With vast knowledge and no small amount of whimsy Martin uses paleontology biology and geology to reveal the awesome power of life s chewing force He provokes us to think deeply about the past and present of bioerosion while also considering how knowledge of this history might aid us in mitigating and adapting to climate change in the future Yes Martin concedes sometimes life can be hard but life also makes everything less hard every day

Crab Cynthia Chris,2021-03-15 What is a crab What significance do crabs play in the world In *Crab* Cynthia Chris reveals that these charming creatures are social by nature creative problem solvers and invaluable members of the environments in which they live Their formidable physical forms their hard to harvest and quick to spoil flesh and their sassy demeanor have inspired artists and writers from Vincent van Gogh to Jean Paul Sartre Chris sketches vivid portraits of these animals tracing the history of the crab through its ancient fossil record to its essential role in protecting its own habitats from the threat of climate change
