

An aerial photograph of a river winding through a desert landscape at sunset. The river is dark and reflective, curving from the bottom left towards the center. The surrounding land is arid, with various shades of brown, tan, and orange, showing signs of erosion and dry vegetation. The sky is a mix of purple, pink, and orange, with some clouds visible. The overall mood is serene and majestic.

Restoring Colorado River Ecosystems Robert W. Adler, 2012-06-22 Over the past century humans have molded the Colorado River to serve their own needs resulting in significant impacts to the river and its ecosystems Today many scientists public officials and citizens hope to restore some of the lost resources in portions of the river and its surrounding lands Environmental restoration on the scale of the Colorado River basin is immensely challenging in addition to an almost overwhelming array of technical difficulties it is fraught with perplexing questions about the appropriate goals of restoration and the extent to which environmental restoration must be balanced against environmental changes designed to promote and sustain human economic development **Restoring Colorado River Ecosystems** explores the many questions and challenges surrounding the issue of large scale restoration of the Colorado River basin and of large scale restoration in general Robert W Adler evaluates the relationships among the laws policies and institutions governing use and management of the Colorado River for human benefit and those designed to protect and restore the river and its environment He examines and critiques the often challenging interactions among law science economics and politics within which restoration efforts must operate Ultimately he suggests that a broad concept of restoration is needed to navigate those uncertain waters and to strike an appropriate balance between human and environmental needs While the book is primarily about restoration of Colorado River ecosystems it is also about uncertainty conflict competing values and the nature pace and implications of environmental change It is about our place in the natural environment and whether there are limits to that presence we ought to respect And it is about our responsibility to the ecosystems we live in and use
