Water Resilience For Human Prosperity:

Water Resilience for Human Prosperity Johan Rockström, 2014-03-27 A new approach to water resources for researchers professionals and graduate students focusing on global sustainability and socio ecological resilience to change **Water Resilience for Human Prosperity** Johan Rockström, 2014 The world s human population now constitutes the largest driving force of changes to the biosphere Emerging water challenges require new ideas for governance and management of water resources in the context of rapid global change This book presents a new approach to water resources addressing global sustainability and focusing on socio ecological resilience to changes Topics covered include the risks of unexpected change human impacts and dependence on global water the prospects for feeding the world s population by 2050 and a pathway for the future The book s innovative and integrated approach links green and blue freshwater with terrestrial and aquatic ecosystem functions and use It also links changes arising from land use alteration with the impacts of those changes on social ecological systems and ecosystem services This is an important state of the art resource for academic researchers and water resource professionals and also a key reference for graduate students studying water resource governance and management

Water Resilience Julia Baird, Ryan Plummer, 2020-09-21 This book synthesizes current knowledge and understanding of management and governance in the context of water resilience advances theory through synthesis of research and experiences from a variety of disciplinary perspectives The book highlights the implications of theory and experience for innovation in practice and policy and it explores frontiers and future research The book further addresses the need for a consolidated interdisciplinary approach to the theoretical advances and practical implications of water resilience for academics resource managers aid organizations policy makers and citizens **Principles for Building Resilience** Reinette Biggs, Maja Schlüter, Michael L. Schoon, 2015-04-02 As both the societies and the world in which we live face increasingly rapid and turbulent changes the concept of resilience has become an active and important research area Reflecting the very latest research this book provides a critical review of the ways in which resilience of social ecological systems and the ecosystem services they provide can be enhanced With contributions from leaders in the field the chapters are structured around seven key principles for building resilience maintain diversity and redundancy manage connectivity manage slow variables and feedbacks foster complex adaptive systems thinking encourage learning broaden participation and promote polycentric governance The authors assess the evidence in support of these principles discussing their practical application and outlining further research needs Intended for researchers practitioners and graduate students this is an ideal resource for anyone working in resilience science and for those in the broader fields of sustainability science environmental management and governance **Urban Water Governance in Postcolonial Zimbabwe** Abraham R. Matamanda, Tazviona R. Gambe, Johannes I. Bhanye, Tafadzwa C. Maramura, Oratilwe Annastacia Khoza, 2025-09-04 This book focuses on urban water supply and governance in the Global South using urban Zimbabwe as a case study to provide insights and perspectives

into the realities of the water governance Applying a resilience and sustainability perspective we argue that fragmentation of responsibilities between various institutions the difficulty of coordination at various levels and the politics centered on water supply constrain effective water governance in Zimbabwe This has resulted in a downward spiral in urban water services in Zimbabwe s urban centers Additionally the innovative nature of this study is to draw from an often neglected dimension in urban water governance which is the political ecology which brings into perspective the varying interests associated with environmental contests and conflicts that influence water allocation and sharing among urban areas by the public sector Therefore this book dwells on understanding the politics economic and ecology of water governance through an interdisciplinary lens This analysis is critical for this study because Zimbabwe s current state of obsolete water infrastructure has also had a negative impact on the supply of high quality portable water services to the public in urban areas This book will be a critical read for academic and professionals in the fields of urban geographers planners sociologists and water experts It will also be useful for undergraduate and postgraduate students from Geography Urban and regional Planning Political Science Development Studies and Economics

The Biopolitics of Water Sofie Hellberg, 2018-03-28 Biopolitics refers to a form of politics concerned with administering and regulating the conditions of life at an aggregated level of populations This book provides a biopolitical perspective on water governance and its effects It draws on the work of Foucault to explore how notions of scarcity are used in strategies of governance and how such governance differentiates between different populations Furthermore the author investigates what such biopolitical regulation means for people s lifestyles and the way they understand themselves and their moral responsibilities as humans individuals and citizens The book begins by investigating the global water agenda with a particular emphasis on its focus on water for basic needs and provides different examples of hydromentalities around the world It also presents rich empirical details of one local case in South Africa By carefully exploring the water stories of water users the book provides new perspectives on the relationship between water and power Additionally it offers an innovative methodological framework through which we can study the workings of governance more generally and water governance specifically It thereby contributes to the scholarship on water governance in relation to how water governance and technologies are part of producing subjectivities notions of life and lifestyles and more specifically how the global water agenda can work so as to produce or further entrench distinctions between different lives and lifestyles Ultimately such differences between individuals and populations that are produced as an effect of water governance are assessed in relation to social sustainability

Unasylva 251 Food and Agriculture Organization of the United Nations, 2019-12-05 Water drinkable usable water is likely to be one of the most limiting resources in the future given the growing global population the high water demand of most agricultural production systems and the confounding effects of climate change We need to manage water wisely efficiently cost effectively and equitably if we are to avoid the calamity of a lack of usable water supply Forested watersheds provide an estimated 75 percent of the world s

accessible freshwater resources on which more than half the Earth's people depend for domestic agricultural industrial and environmental purposes Forests therefore are vital natural infrastructure and their management can provide nature based solutions for a range of water related societal challenges This edition of *Unasylva* explores that potential

Research Handbook on Climate Change and Agricultural Law Mary Jane Angelo, Anél Du Plessis, 2017-03-31 Research Handbook on Climate Change and Agricultural Law Hydrosocial Territories and Water Equity Rutgerd Boelens, Ben Crow, Jaime Hoogesteger, Flora E. Lu, Erik Swyngedouw, Jeroen Vos, 2017-06-01 Bringing together a multidisciplinary set of scholars and diverse case studies from across the globe this book explores the management governance and understandings around water a key element in the assemblage of hydrosocial territories Hydrosocial territories are spatial configurations of people institutions water flows hydraulic technology and the biophysical environment that revolve around the control of water Territorial politics finds expression in encounters of diverse actors with divergent spatial and political geographical interests as a result water in justice and in equity are embedded in these socio ecological contexts The territory building projections and strategies compete superimpose and align to strengthen specific water control claims of various interests As a result actors continuously recompose the territory's hydraulic grid cultural reference frames and political economic relationships Using a political ecology focus the different contributions to this book explore territorial struggles demonstrating that these contestations are not merely skirmishes over natural resources but battles over meaning norms knowledge identity authority and discourses The articles in this book were originally published in the journal *Water International*

The ^AOxford Handbook of Food, Water and Society Tony Allan, Brendan Bromwich, Martin Keulertz, Anthony Colman, 2019-09-27 Society's greatest use of water is in food production which makes farmers central to global environmental management Current food value chains however do not enable farmers to both feed a growing population and steward natural resources Through a carefully curated collection of articles written by water and food system scientists and professionals including farmers this Oxford Handbook considers the interconnected issues of real water in the environment and virtual water in food value chains and investigates society's influence on both This perspective highlights considerable challenges for food security and environmental stewardship in the context of ongoing global change The book discusses these issues by region and by selected commodities emphasizing innovation needed for the food system to meet future challenges
