The Vulnerability Of Cities Natural Disasters And Social Resilience:

The Vulnerability of Cities Mark Pelling, 2012-06-25 When disaster strikes in cities the effects can be catastrophic compared to other environments But what factors actually determine the vulnerability or resilience of cities The Vulnerability of Cities fills a vital gap in disaster studies by examining the too often overlooked impact of disasters on cities the conditions leading to high losses from urban disasters and why some households and communities withstand disaster more effectively than others Mark Pelling takes a fresh look at the literature on disasters and urbanization in light of recent catastrophes He presents three detailed studies of cities in the global South drawn from countries with contrasting political and developmental contexts Bridgetown Barbados a liberal democracy Georgetown Guyana a post socialist state and Santo Domingo Dominican Republic an authoritarian state in democratic transition This book demonstrates that strengthening local capacity through appropriate housing disaster preparedness infrastructure and livelihoods is crucial to improving civic resilience to disasters Equally important are strong partnerships between local community based organizations external non governmental and governmental organizations public and private sectors and between city and national government The author highlights and discusses these best practices for handling urban disasters With rapid urbanization across the globe this book is a must read for professionals policy makers students and researchers in disaster management urban development and planning transport planning architecture social studies and earth sciences

Spatial Diversity and Dynamics in Resources and Urban Development Ashok K. Dutt, Allen G. Noble, Frank J. Costa, Rajiv R. Thakur, Sudhir K. Thakur, 2015-11-24 This double volume work focuses on socio demographics and the use of such data to support strategic resource management and planning initiatives Papers go beyond explanations of methods technique and traditional applications to explore new intersections in the dynamic relationship between the utilization and management of resources and urban development International authors explore numerous experiences characteristics of development and decision making influences from across Asia and Southeast Asia as well as recounting examples from America and Africa Papers propound techniques and methods used in geographical research such as support vector machines socio economic correlates and travel behaviour analysis In this volume the contributors examine cutting edge theories explaining diversity and dynamics in urban development Topics covered include human vulnerability to hazards space and urban problematic assessment and evaluation of regional urban systems and structures and urban transformations as a result of structural change economic development and underdevelopment The significance of these topics lie in the pace and volume of change as is happening in geography reflecting continued development within established fields of inquiry and the introduction of significantly new approaches during the last decade Readers are invited to consider the dynamics of spatial expansion of urban areas and economic development and to explore conceptual discussion of the innovations in and challenges on urbanization processes urban spaces themselves and both resource management and environmental management Together

the two volumes contribute to the interdisciplinary literature on regional resources and urban development by collating recent research with geography at its core. Scholars of urban geography, human geography, urbanism, and sustainable development will be particularly interested in this book.

Natural Disasters and Risk Management in Canada Nirupama Agrawal, 2018-03-27. These chapters provide valuable and comprehensive information on a variety of hazards including both scientific and social aspects of disasters. The work introduces the concept of large, medium, and small scale hazards and includes many useful case studies as well as working examples of theoretical concepts. As readers will acknowledge today, the distinction between natural and technological hazards is becoming blurred, and a new concept of NATECH hazards is evolving. For permanent hazards such as tides, wind, waves, coastal erosion, and climate change, routine predictions are made; whereas for evanescent hazards including droughts, sea level rise, and coastal subsidence, monitoring of various parameters is the norm. Only for episodic hazards, for example hurricanes, winter storms, tsunamis, and river floods, early warning systems are used with varying degrees of success. The book explores how, for certain episodic hazards like tornadoes, landslides, forest fires, snow avalanches, and volcanic eruptions, the early warning systems are still in various stages of development. Readers will gain knowledge of theoretical and practical concepts of risk evaluation which assist in better understanding of disaster dynamics, and readers will become better equipped in quantification of disaster risk and vulnerability. The author explains how risk reduction initiatives taking into account stakeholders' participation and perception can provide a roadmap to building resilient communities and cities. This book will be useful not only to practitioners of disaster management but also to research scholars and graduate students. It is highly readable and will appeal more broadly too to all those who are interested in the very latest thinking on and expert analysis of hazards and disasters.

Adapting Cities to Climate Change Jane Bicknell, David Dodman, David Satterthwaite, 2012. This volume brings together for the first time a wide ranging and detailed body of information identifying and assessing risk, vulnerability, and adaptation to climate change in urban centres in low and middle income countries. Framed by an overview of the main possibilities and constraints for adaptation, the contributors examine the implications of climate change for cities in Africa, Asia, and Latin America and propose innovative agendas for adaptation. The book should be of interest to policy makers, practitioners, and academics who face the challenge of addressing climate change vulnerability and adaptation in urban centres throughout the global South. Published with E.U. and International Institute for Environment and Development.

Natural Disasters in the Ottoman Empire Yaron Ayalon, 2015. Yaron Ayalon explores the Ottoman Empire's history of natural disasters and its responses on a state, communal, and individual level.

The "Katrina Effect" William M. Taylor, Michael P. Levine, Oenone Rooksby, Joely-Kym Sobott, 2015-08-27. On August 29th 2005, the headwaters of Hurricane Katrina's storm surge arrived at New Orleans; the levees broke, and the city was inundated. Perhaps no other disaster of the 21st century has so captured the global media's attention and featured in the imagination of disaster like Katrina. The Katrina Effect charts the important ethical territory that underscores thinking

about disaster and the built environment globally Given the unfolding of recent events disasters are acquiring original and complex meanings This is partly because of the global expansion and technological interaction of urban societies in which the multiple and varied impacts of disasters are recognized These meanings pose significant new problems for civil society what becomes of public accountability egalitarianism and other democratic ideals in the face of catastrophe This collection of critical essays assesses the storm s global impact on overlapping urban social and political imaginaries Given the coincidence and perfect storm of environmental geo political and economic challenges facing liberal democratic societies communities will come under increasing strain to preserve and restore social fabric while affording all citizens equal opportunity in determining the forms that future cities and communities will take Today 21st century economic neo liberalism global warming or recent theories of urban vulnerability and resilience provide key new contexts for understanding the meaning and legacy of Katrina

Spatial Planning and Sustainable Development Mitsuhiro Kawakami,Zhen-jiang Shen,Jen-te Pai,Xiao-lu Gao,Ming Zhang,2013-02-28 This book attempts to provide insights into the achievement of a sustainable urban form through spatial planning and implementation here we focus on planning experiences at the levels of local cities and some metropolitan areas in Asian countries This book investigates the impact of planning policy on spatial planning implementation from multidisciplinary viewpoints encompassing land use patterns housing development transportation green design and agricultural and ecological systems in the urbanization process We seek to learn from researchers in an integrated multidisciplinary platform that reflects a variety of perspectives such as economic development social equality and ecological protection with a view to achieving a sustainable urban form

Cities at Risk Pierre Filion,Gary Sands,2016-03-03 As levels of urbanization increase around the world the growing concentrations of population and economic activity increases vulnerability to natural disasters Interdependencies among urban populations mean that damage to the built environment including water sewer and energy infrastructure can affect millions Even if there is no change in the rate of occurrence of natural disasters an unlikely prospect in the face of ongoing climate change the potential for human and economic loss will continue to increase along with the time required to recover How do cities prepare for and recover from natural disasters In this book the authors provide a broad overview of the issues related to the impacts of disasters on cities around the world from assessing risks to accounting for damages The comparative approach across different types of disasters in a range of urban locations is useful in identifying opportunities for policy transfer While there is no one size fits all solution to hazard mitigation valuable lessons can be learned from the experiences of others The chapters emphasize different modes for assessing hazard risk as well as strategies for increasing the resiliency of vulnerable populations

Disaster Governance in Urbanising Asia Michelle Ann Miller,Mike Douglass,2015-12-09 This edited book approaches the threat and impact of environmental disasters on Asia s urban populations from a governance perspective It adopts a multi sector and multi disciplinary approach to disaster governance that emphasises the importance of multiple stakeholders in

preparing for responding to and recovering from disasters and their cascading impacts in Asia's cities. The contributors to this volume take a broad view of the multifaceted causalities and the interconnected threats and vulnerabilities of environmental disasters in urbanising Asia. As such, the book is an invitation to advance scholarship in the search for more effective comprehensive and inclusive disaster preparedness agendas, recovery programs and development priorities.

Planning for Resilient Small and Medium-Sized Cities in Ghana Stephen Kofi Diko, Seth Asare Okyere, Stephen Leonard Mensah, Louis Kusi Frimpong, 2025-09-10. *Planning for Resilient Small and Medium Sized Cities in Ghana* explores the resilience and planning dynamics and complexities of rapid urban transitions in Ghana's small and medium sized cities (SMCs) and their implications for Africa and the Global South. The book argues that Ghana's urban future may have more to do with the steady growth of SMCs where urban consolidation is gradually taking a foothold. Recognizing that Ghana's primary cities are well known to be socio-ecological hotspots of risk, reactive urban planning and entrenched inequalities of alarming proportions, this book asks: would SMCs follow these troubling realities and trajectories in large cities or leapfrog to resilient futures that work for all? Through a range of interdisciplinary perspectives, the contributions emphasize the need for integrated planning strategies to navigate socio-ecological challenges and opportunities that SMCs face in terms of infrastructure, governance and climate resilience. By centering overlooked and understudied SMCs in Ghana's urban scholarship, this book realigns resilience planning to the spaces and places emerging as the frontiers of socio-ecological crises. It will be of interest to students and researchers of city and regional planning, urban studies, geography, environmental studies and science, public policy, development studies and public health, as well as urban planners, community development practitioners, geographers, environmental disaster and resilient personnel and policymakers. *Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation* Intergovernmental Panel on Climate Change, 2012-05-28. Extreme weather and climate events interacting with exposed and vulnerable human and natural systems can lead to disasters. This Special Report explores the social as well as physical dimensions of weather and climate related disasters, considering opportunities for managing risks at local to international scales. SREX was approved and accepted by the Intergovernmental Panel on Climate Change (IPCC) on 18 November 2011 in Kampala, Uganda. *Disaster Risk Reduction for the Built Environment* Lee Boshier, Ksenia Chmutina, 2017-04-03. *Disaster Risk Reduction for the Built Environment* provides a multi-faceted introduction to how a wide range of risk reduction options can be mainstreamed into formal and informal construction decision making processes so that Disaster Risk Reduction (DRR) can become part of the developmental DNA. The contents highlight the positive roles that practitioners such as civil and structural engineers, urban planners and designers and architects, to name just a few, can undertake to ensure that disaster risk is addressed when re-developing the built environment. The book does not set out prescriptive, context-blind solutions to complex problems because such solutions can invariably generate new problems. Instead, it raises awareness and in doing so, inspires a broad range of people to

consider DRR in their work or everyday practices This highly illustrated text book provides a broad range of examples case studies and thinking points that can help the reader to consider how DRR approaches might be adapted for differing contexts

The Mekong Delta System Fabrice G. Renaud, Claudia Kuenzer, 2012-06-01 This book about the Mekong Delta presents a unique collection of state of the art contributions by international experts from different scientific disciplines about the characteristics and pressing water related challenges of the Mekong Delta in Vietnam The Mekong Delta belongs to one of the areas which are to expect the largest challenges concerning environmental change and climate change induced sea level rise The Delta acts as the rice bowl of Southeast Asia and is home to over 17 Million people who need to cope with ecologic as well as socio economic changes linked to the rapid economic development of the country Annual floods severe droughts salt water intrusion degrading water quality tropical cyclones hydrologic changes due to hydropower projects in the upstream of the Mekong coastal erosion and the loss of biodiversity are some of the problems in the region Heterogeneous resource management responsibilities and the fact that the Mekong and thus also the Delta is influenced by six countries aggravate the situation Integrated water resources management and fostered cooperation and information exchange are pressing needs for the sustainable development of the Delta

The Risk City Yosef Jabareen, 2015-04-23 Contemporary cities face phenomenal risks and they face particularly high levels of mounting social and environmental risks including social polarization urban conflicts riots terror and climate change threats This book suggests that climate change and its resulting uncertainties challenge the concepts procedures and scope of conventional approaches to planning creating a need to rethink and revise current planning methods Therefore this book suggests a paradigm shift in our thinking interrogation and planning of our cities Based on the contemporary conditions of risk at cities this book conceptualizes the risk city as a construct of three interlinked concepts of risk trust and practice It is a construct of risk and its new evolving conditions and knowledge of uncertainties stem from climate change and other risks and uncertainties As a construct of practices the risk city produces social and political institutional framework and promotes practices accordingly in order to reduce risk and risk possibilities and to increase trust In light of the complex challenges and risks to the human habitat that have emerged in recent years many cities have prepared various types of plans aimed at addressing the challenges posed by climate change Nonetheless despite the importance of these plans and the major public resources invested in their formulation we still know little about them and have yet to begin studying them and assessing their contributions From the innovative perspective of the risk city this book asks critical questions about the nature vision practices and potential impact of the recent climate change oriented plans What kinds of risks do they attempt to address what types of practices do they institute and what types of approaches do they apply Do they adequately address the risks and uncertainties posed How do they contribute to the worldwide effort to reduce greenhouse gas emissions This book uses the methodologically innovative Risk City framework to examine the nature vision outcomes practices and impact of these crucial plans as well as their contribution to the resilience

of our cities and to global efforts toward reducing greenhouse gas emissions
