LATEST in a line of well-known sports cars, the 4A model was added to the range in the early part of this year. The car is a development of the earlier model, and mechanical features of the 4A car include the option for a rear swing-axle, similar to that employed on the 2000 car. Stromberg carburetion on the engine and the adoption of various modifications which had been made to the preceding series. Principal among differences in the sphere of maintenance is that with the 4A model, there has been a complete change of servicing routine. The new schedule of operations is set out on p. viii, and readers' attention is drawn to it. There are now only

DISTINGUISHING FEATURES. This model is, of course, almost identical externally with the earlier car, and is available in hard- or soft-top form. It is in the mechanical details that differences occur

two basic services, at 6,000 mile and 12,000 mile intervals, apart from a specific routine of operations which relates to a "free" service, which is carried out only at the first 1,000 miles and consequently is not detailed in this article.

Layout of mechanical components is merely embodied, the four-cylinder overhead valve engine drives through a diaphragm spring clutch to a four-speed all-synchromesh gearbox, and thence by short

propeller shaft to the final drive contained within either a rigid, or swing rear axle, either type being available to choice. Additionally, there is the option of overdrive fitment to the gearbox; when so specified, the overdrive comprises in detail with that already described in Service Supplement No. 126/Ch. to which readers are referred for full constructional and repair data. Front suspension is independent, of the coil spring and wishbone link pattern. In the case

of the swing rear axle cars, rear suspension is also independent, by the same means, and in the case of the rigid rear axle models, rear suspension is by half-elliptic leaf springs, similar to the TR4 cars. For data in this respect, readers are referred to Service Data No. 393, which contains information on this subject.

Vehicles are identified by Commission numbers, and prefixed CT or CTC. These numbers are to be found stamped on a plate which is attached to the dash panel adjacent to the screen-wiper motor and visible with the bonnet raised. Car bodies also have serial numbers, and these numbers are to be seen on the right-hand side of the dash panel, also beneath the bonnet. Engines are serial numbered, and this serial location is on the near-side of the cylinder block casting.

It is essential that all relevant Commission and serial numbers are quoted when corresponding with the vehicle manufacturers, or when ordering spare parts through the Triumph distributive network.

Special tools for use in repair and overhaul work are available from the tool makers, V. L. Churchill & Co., Ltd., London Road, Daventry, Northants. A list of these which are considered essential for this purpose is set out on p. iii.

Throughout the car, threaded parts are of the Unified thread series pattern and form. For all practical purposes, the Unified and A.N.F. thread series are interchangeable, but care should be taken to see that threaded parts are mated correctly on assembly.
