Urban Green Spaces and Human Health Yuan Li, Diogo Guedes Vidal, Abdullah Akpinar, Ding Li, Hongxiao Liu, 2024-06-12 An important aspect of sustainable and regenerative urban development is to improve collective well-being standards. The United Nations endorsed the 2030 Agenda for Sustainable Development in 2015, which establishes seventeen Sustainable Development Goals (SDGs) to end poverty, protect the planet, and improve the lives and prospects of everyone and everywhere by 2030. Urban Green Spaces have a significant impact on the living condition and public health, which are closely associated with several SDGs, including good health and well-being (SDG 3), clean water and sanitation (SDG 6), industry, innovation, and infrastructure (SDG 9), and sustainable cities and communities (SDG 11). Here, the concept of One Health gains high relevance by recognizing that interconnections among humans, animals, and environment is a key issue in public health and wellbeing that stimulates interdisciplinary collaborations to develop a more holistic understanding and effective action against public health threats.

Plant Diversification Driven by Genome and Chromosome Evolution and Its Reproductive and Environmental Correlates Marcial Escudero, Enrique Maguilla, Angelino Carta, Santiago Martín-Bravo, Carmen Benítez Benítez, 2025-10-29 Chromosome genome evolution is known as a major driver of diversification in eukaryotes, particularly in plants. At the macroevolutionary level, chromosome genome evolution has been correlated with diversification rates, whereas on a microevolutionary scale, with population differentiation. Moreover, they have been linked with shifts in both ecological niches and reproductive systems across lineages. However, the precise mechanisms under these apparent correlations remain largely unexplored. In this Research Topic, our objective is to study the impact of chromosome and genome evolution on diversification patterns in plants. Specifically, we aim to disentangle the mechanisms through which chromosome and genome evolution may be related to different ecological scenarios: biogeographic changes, environmental shifts, changes in plant-animal interactions, including pollinator community, etc. i) influence crucial plant traits associated with reproductive strategies and ii) elucidate how the combination of these intrinsic traits and extrinsic constraints may explain patterns of diversification in plants. By integrating macro and microevolutionary perspectives, we aim to provide an ecological and evolutionary synthesis that addresses the current knowledge gap in the transition from both evolutionary scales. We welcome submissions of original research, reviews, and method articles. We encourage authors to submit their research on the impact of genome/chromosome evolution in relation to the following factors: Diversification rates, Speciation, Biogeography, Phylogeography, Niche evolution, Reproductive biology. The integration of macro and microevolutionary perspectives.
