Research Methods for Translation Studies introduces digital humanities methods and tools to translation studies. This accessible book covers computer assisted approaches to data collection, data analysis, and data visualization and presentation, offering authentic examples of these approaches in both translation studies research and projects from related fields. With a diverse range of examples featuring various contexts and language combinations to ensure relevance to a wide readership, this volume covers the strengths and limitations of computer assisted research methods as well as the ethical challenges specific to this kind of research. This is an essential text for advanced undergraduate and graduate translation studies students as well as researchers looking to adopt new research methods.

Reassembling the Republic of Letters in the Digital Age Howard Hotson, Thomas Wallnig, 2019. Between 1500 and 1800 the rapid evolution of postal communication allowed ordinary men and women to scatter letters across Europe like never before. This exchange helped knit together what contemporaries called the *respublica litteraria*, a knowledge based civil society crucial to that era's intellectual breakthroughs, formative of many modern values and institutions, and a potential cornerstone of a transnational level of European identity. Ironically, the exchange of letters which created this community also dispersed the documentation required to study it, posing enormous difficulties for historians of the subject ever since. To reassemble that scattered material and chart the history of that imagined community, we need a revolution in digital communications. Between 2014 and 2018 an EU networking grant assembled an interdisciplinary community of over 200 experts from 33 different countries and many different fields for four years of structured discussion. The aim was to envisage transnational digital infrastructure for facilitating the radically multilateral collaboration needed to reassemble this scattered documentation and to support a new generation of scholarly work and public dissemination. The framework emerging from those discussions, potentially applicable also to other forms of intellectual, cultural, and economic exchange in other periods and regions, is documented in this book.

A Primer for Teaching Digital History Jennifer Guiliano, 2022-04-22. *A Primer for Teaching Digital History* is a guide for college and high school teachers who are teaching digital history for the first time or for experienced teachers who want to reinvigorate their pedagogy. It can also serve those who are training future teachers to prepare their own syllabi as well as teachers who want to incorporate digital history into their history courses. Offering design principles for approaching digital history that represent the possibilities that digital research and scholarship can take, Jennifer Guiliano outlines potential strategies and methods for building syllabi and curricula. Taking readers through the process of selecting data, identifying learning outcomes, and determining which tools students will use in the classroom, Guiliano outlines popular research methods including digital source criticism, text analysis, and visualization. She also discusses digital archives, exhibits, and collections as well as audiovisual and mixed media narratives such as short documentaries, podcasts, and multimodal storytelling. Throughout, Guiliano illuminates how digital history can enhance understandings of not just what histories are told but how they are told and who has access to them.
