Verification Of Sequential And Concurrent Programs Texts In Computer Science:

Verification of Sequential and Concurrent Programs Krzysztof R. Apt, Frank S. de Boer, Ernst-Rüdiger Olderog, 2009-09-18
HIS BOOK CONTAINS a most comprehensive text that presents syntax directed and compositional methods for the formal verification of programs The approach is not language bounded in the sense that it covers a large variety of programming models and features that appear in most modern programming languages It covers the classes of sequential and parallel deterministic and non deterministic distributed and object oriented programs For each of the classes it presents the various criteria of correctness that are relevant for these classes such as interference freedom deadlock freedom and appropriate notions of liveness for parallel programs Also special proof rules appropriate for each class of programs are presented In spite of this diversity due to the rich program classes considered there exist a uniform underlying theory of verification which is syntactically oriented and promotes compositional approaches to verification leading to scalability of the methods The text strikes the proper balance between mathematical rigor and dactylic introduction of increasingly complex rules in an incremental manner adequately supported by state of the art examples As a result it can serve as a textbook for a variety of courses on different levels and varying durations It can also serve as a reference book for researchers in the theory of verification in particular since it contains much material that never before appeared in book form This is specially true for the treatment of object oriented programs which is entirely novel and is strikingly elegant

Verification of Sequential and Concurrent Programs Krzysztof R. Apt, E.-R. Olderog, 1991 This book provides a structural introduction to program verification Sequential programs in the form of deterministic and nondeterministic programs and concurrent programs in the form of parallel and distributed programs are considered within the context of their partial and total correctness While other books have covered verification and semantics of sequential programs this is the first book to address verification and semantics of structured concurrent programs The book is appropriate for either a one or two semester introductory course on program verification for upper division of undergraduate studies or graduate students It can also be used as an introduction to operational semantics Outlines of possible one semester courses are presented in the preface of the book Within these chapters the authors systematically discuss five classes of programs concentrating on operational semantics syntactically directed assertional proof systems soundness proofs of the proof systems program transformations correctness proofs of the program transformations and correctness proofs of a substantial example Each chapter is developed in a systematic and easy to understand manner and closes with a list of exercises The material presented here draws on work which until now was only available in the form of advanced research publications A large portion of the material is entirely new This book provides an introduction to the subject which also will lead to current research problems in the areas considered

to modern computing and promote their wider application BCS FACS is proud that Tony Hoare presented his original ideas on CSP at one of its first meetings in 1978 The two day event 7-8 July 2004 was hosted by London South Bank University's Institute for Computing Research Faculty of Business Computing and Information Management The intention was to celebrate reflection upon and look beyond the first quarter century of CSP's contribution to computer science The meeting examined the impact of CSP on many areas stretching from semantics mathematical models for understanding concurrency and communications and logic for reasoning about behavior through the design of parallel programming languages i o parallelism synchronization and threads to applications varying from distributed software and parallel computing to information security Web services and concurrent hardware circuits It included a panel discussion with panelists Brookes Hoare de Roever and Roscoe chaired by Je Sanders poster presentations by PhD students and others featured a re-alarm requiring evacuation in the rain and concluded with the presentation of a fountain pen to Prof Sir C A R Hoare

Thinking Programs Wolfgang Schreiner, 2025-08-29 This book describes some basic principles that allow developers of computer programs computer scientists software engineers programmers to clearly think about the artifacts they deal with in their daily work data types programming languages programs written in these languages that compute wanted outputs from given inputs and programs that describe continuously executing systems The core message is that clear thinking about programs can be expressed in a single universal language the formal language of logic Apart from its universal elegance and expressiveness this logical approach to the formal modeling of and reasoning about computer programs has another advantage due to advances in computational logic automated theorem proving satisfiability solving model checking nowadays much of this process can be supported by

software This book therefore accompanies its theoretical elaborations by practical demonstrations of various systems and tools that are based on or make use of the presented logical underpinnings *Models, Algorithms, Logics and Tools* Luca Aceto, Giorgio Bacci, Giovanni Bacci, Anna Ingólfssdóttir, Axel Legay, Radu Mardare, 2017-08-17 This Festschrift is published in honor of Kim Guldstrand Larsen one of the earliest precursors of computer science in Denmark on the occasion of his 60th birthday During the last three decades Kim Guldstrand Larsen has given major contributions across a remarkably wide range of topics including real time concurrent and probabilistic models of computation logic in computer science and model checking Since 1995 he has been one of the prime movers behind the model checking tool for real time systems UPPAAL for which he was a co recipient of the CAV Award in 2013 The Festschrift contains 32 papers that feature the broad range of Kim Guldstrand Larsen s research topics such as formal languages and automata theory logic verification model checking and testing algorithmic game theory and mechanism design semantics and reasoning real time and distributed systems and modeling and simulation *The Data Parallel Programming Model* Guy-Rene Perrin, Alain Darte, 1996-09-11 This monograph like book assembles the thoroughly revised and cross reviewed lectures given at the School on Data Parallelism held in Les Menuires France in May 1996 The book is a unique survey on the current status and future perspectives of the currently very promising and popular data parallel programming model Much attention is paid to the style of writing and complementary coverage of the relevant issues throughout the 12 chapters Thus these lecture notes are ideally suited for advanced courses or self instruction on data parallel programming Furthermore the book is indispensable reading for anybody doing research in data parallel programming and related areas *Deductive Software Verification: Future Perspectives* Wolfgang Ahrendt, Bernhard Beckert, Richard Bubel, Reiner Hähnle, Mattias Ulbrich, 2020-12-08 This book presents reflections on the occasion of 20 years on the KeY project that focuses on deductive software verification Since the inception of the KeY project two decades ago the area of deductive verification has evolved considerably Support for real world programming languages by deductive program verification tools has become prevalent This required to overcome significant theoretical and technical challenges to support advanced software engineering and programming concepts The community became more interconnected with a competitive but friendly and supportive environment We took the 20 year anniversary of KeY as an opportunity to invite researchers inside and outside of the project to contribute to a book capturing some state of the art developments in the field We received thirteen contributions from recognized experts of the field addressing the latest challenges The topics of the contributions range from tool development efficiency and usability considerations to novel specification and verification methods This book should offer the reader an up to date impression of the current state of art in deductive verification and we hope inspire her to contribute to the field and to join forces We are looking forward to meeting you at the next conference to listen to your research talks and the resulting fruitful discussions and collaborations
