Rorty,1990-11-30 Richard Rorty s collected papers written during the 1980s and now published in two volumes take up some of the issues which divide Anglo Saxon analytic philosophers and contemporary French and German philosophers and offer something of a compromise agreeing with the latter in their criticisms of traditional notions of truth and objectivity but disagreeing with them over the political implications they draw from dropping traditional philosophical doctrines In this volume Rorty offers a Deweyan account of objectivity as intersubjectivity one that drops claims about universal validity and instead focuses on utility for the purposes of a community The sense in which the natural sciences are exemplary for inquiry is explicated in terms of the moral virtues of scientific communities rather than in terms of a special scientific method The volume concludes with reflections on the relation of social democratic politics to philosophy **The Empire's Rogues:**

The Nature of Order, Book One: The Phenomenon of Life Christopher Alexander,2020-03-30 Christopher Alexander s series of ground breaking books including A Pattern Language and The Timeless Way of Building have pointed to fundamental truths of the way we build revealing what gives life and beauty and true functionality to our buildings and towns Now in The Nature of Order Alexander explores the properties of life itself highlighting a set of well defined structures present in all order and in all life from micro organisms and mountain ranges to good houses and vibrant communities In The Phenomenon of Life the first volume in this four volume masterwork Alexander proposes a scientific view of the world in which all space matter has perceptible degrees of life and sets this understanding of order as an intellectual basis for a new architecture With this view as a foundation we can ask precise questions about what must be done to create more life in our world whether in a room a humble doorknob a neighbourhood or even in a vast region He introduces the concept of living structure basing it upon his theories of centers and of wholeness and defines the fifteen properties from which according to his observations all wholeness is built Alexander argues that living structure is at once both personal and structural Taken as a whole the four books create a sweeping new conception of the nature of things which is both objective and structural hence part of science and also personal in that it shows how and why things have the power to touch the human heart A step has been taken through which these two domains the domain of geometrical structure and the feeling it creates kept separate during four centuries of scientific thought from 1600 to 2000 have finally been united
