Survive and Thrive Wendy Crone, 2022-05-31 The experience of an untenured faculty member is highly dependent on the quality of the mentoring they receive This mentoring may come from a number of different sources and the concept of developing a constellation of mentors is highly recommended but a mentoring relationship that is guided by the mentee s needs will be the most productive Often however the mentee does not know their own needs what questions to ask and what topics they should discuss with a mentor This book provides a guide to the mentoring process for untenured faculty Perspectives are provided and questions posed on topics ranging from establishing scholarly expertise and developing professional networks to personal health and balancing responsibilities The questions posed are not intended for the mentee to answer in isolation rather a junior faculty member should approach these questions throughout their untenured years with the help of their mentors *Survive and Thrive A Guide for Untenured Faculty* will help to facilitate the mentoring process and lead junior faculty to a path where they can move beyond just surviving and truly thrive in their position

Developing Metrics for Assessing Engineering Instruction National Academy of Engineering, Steering Committee for Evaluating Instructional Scholarship in Engineering, 2009-05-15 Faculty in all disciplines must continually prioritize their time to reflect the many demands of their faculty obligations but they must also prioritize their efforts in ways that will improve the prospects of career advancement The current perception is that research contributions are the most important measure with respect to faculty promotion and tenure decisions and that teaching effectiveness is less valued regardless of the stated weighting of research teaching and service In addition methods for assessing research accomplishments are well established even though imperfect whereas metrics for assessing teaching learning and instructional effectiveness are not as well defined or well established *Developing Metrics for Assessing Engineering Instruction* provides a concise description of a process to develop and institute a valid and acceptable means of measuring

teaching effectiveness in order to foster greater acceptance and rewards for faculty efforts to improve their performance of the teaching role that makes up a part of their faculty responsibility Although the focus of this book is in the area of engineering the concepts and approaches are applicable to all fields in higher education *Equal Rites, Unequal Outcomes* Lilli S.
