Trends In Ecological Research For The 1980s Nato Conference Series I Ecology:

Trends in Ecological Research for the 1980s June H. Cooley, 2013-03-13 Is ecology at a crossroad After three decades of rapid though somewhat anarchic development many ecologists now are beginning to ask this question They have the feeling of no longer belonging to a unified and mature scientific discipline Many of them claim to be mere empiricists whereas others are proud to be considered theoreticians Each side has its own journals and holds its own specialists meetings tending to disregard the achievements of the other The communication gap between the two schools is quickly widening to the detriment of both To make things worse the word ecology now has a different meaning for the professional biologists and the general public Ecology is still considered as a creditable though rather soft scientific discipline by the former whereas it is perceived as a new non conformist political philosophy by the latter Empirical ecologists are fundamentally naturalists who enjoy the immense complexity of the natural world and devote their lifetimes to the description of the many adaptive characteristics morphological biological or behavioral of the hundreds of thousands of species sharing the earth with us They generally are ignorant of if not allergic to the use of any mathematical representation of living phenomena They feel that ecological theory is rapidly becoming a mathematical game that has lost any contact with the realities of life
