Context and Method in Qualitative Research Gale Miller, Robert Dingwall, 1997-06-11 A critical examination of the principles and practice of qualitative research is provided in this book which examines the interplay between context and method making it invaluable for both the experienced and the beginning researcher A range of methodological and practical

issues central to the concerns of qualitative researchers are addressed These include the validity and plausibility of qualitative methods the problems encountered using specific techniques in a range of social settings and the moral issues raised in qualitative research These themes are related to practical issues which are illustrated by a breadth of examples and in depth case studies The contributors look at the methods and strategies that they have used to study everyday life and make suggestions to readers on why and how they might conduct their own studies They raise issues that go beyond cookbook discussions of issues such as how to enter social settings manage the subjects of one's research and ask good questions in the process of formulating research strategies These issues are addressed within the framework of the larger purposes and uses of qualitative research where specific methodological problems are not used as ends in themselves

The SAGE Handbook of Qualitative Data Collection Uwe Flick, 2017-12-14 How we understand and define qualitative data is changing with implications not only for the techniques of data analysis but also how data are collected New devices technologies and online spaces open up new ways for researchers to approach and collect images moving images text and talk The SAGE Handbook of Qualitative Data Collection systematically explores the approaches techniques debates and new frontiers for creating collecting and producing qualitative data Bringing together contributions from internationally leading scholars in the field the handbook offers a state of the art look at key themes across six thematic parts Part I Charting the Routes Part II Concepts Contexts Basics Part III Types of Data and How to Collect Them Part IV Digital and Internet Data Part V Triangulation and Mixed Methods Part VI Collecting Data in Specific Populations *Urban Regeneration, Community Power and the (In)Significance of 'Race'* Paul J. Maginn, 2017-11-30 The concepts of community consultation and participation have come to dominate academic and policy debate about urban regeneration partnerships However there has been relatively little discussion about the nature of community power within regeneration partnerships Adopting an ethnographic approach in the study of community participation and power and the significance of race in three ethnically diverse neighbourhoods in London this book highlights that there has been a pluralistic turn in British urban regeneration policy Local communities often portrayed as the least powerful partner within partnerships are shown to use various strategies to influence decision making thus giving rise to a new typology of pluralism pragmatic hyper and paternalistic Furthermore the significance of race and racism within community forums and regeneration partnerships is challenged The playful use of the term In Significance in the title is linked to the argument that although racism exists race does not always matter

Edwards, Joe O'Mahoney, Steve Vincent, 2014-03-20 The development of Critical Realism CR as a philosophy of science is generally attributed to a series of books by Roy Bhaskar It has proven to be influential not least because it has an affinity with many people's views about the way the world fits together both within and outside of academia Whilst there are numerous contributions outlining CR theory in sociological and organizational research as well as general texts about realist ontology work delineating the consequences of these views for research practice is an emerging area of interest This book aims to fill a significant gap in the literature by providing a practical guide to the application of CR in empirical research projects More specifically it explores the methodological consequences of committing to a CR ontology the assumptions that researchers from this tradition make about the nature of reality These assumptions are important because ontological commitments which relate what we believe exists often affect our epistemological concerns which relate to our beliefs about how whatever exists can be studied and known Thus for a researcher ontology and epistemology are important because they have consequences for the possibilities and limits of the research methods techniques and analyses that they employ The book explains what CR is and outlines the logic of research design In a series of chapters on major social science research methods purpose written by experts in the relevant technique the book contains extended illustration of how to conduct inquiry using CR
