

## ENERGY, WORK, POWER AND MACHINES

### Energy

**This is the ability to do work.**

**Forms of energy.**

1. **Chemical energy:** - this is found in foods, oils charcoal firewood etc.
2. **Mechanical energy:** - there are two types;
  - i. **Potential energy** - a body possesses potential energy due to its relative position or state
  - ii. **Kinetic energy** - energy possessed by a body due to its motion i.e. wind, water
  - iii. **Wave energy** - wave energy may be produced by vibrating objects or particles i.e. light, sound or tidal waves.
  - iv. **Electrical energy** - this is energy formed by conversion of other forms of energy i.e. generators.

### Transformation and conservation of energy

Any device that facilitates energy transformations is called **transducer**. Energy can be transformed from one form to another i.e. mechanical - electrical - heat energy. **The law of conservation of energy states that "energy cannot be created or destroyed; it can only be transformed from one form to another".**

### Work

**Work is done when a force acts on a body and the body moves in the direction of the force.**

Work done = force  $\times$  distance moved by object

$$W = F \times d$$

Work is measured in Nm. **1 Nm = 1 Joule (J)**

### Examples

1. Calculate the work done by a stone mason lifting a stone of mass 15 kg through a height of 2.0 m. (take  $g=10\text{N/kg}$ )  
**Solution**  
Work done = force  $\times$  distance  
 $= (15 \times 10) \times 2 = 300 \text{ Nm or } 300 \text{ J}$
2. A girl of mass 50 kg walks up a flight of 12 steps. If each step is 30 cm high, calculate the work done by the girl climbing the stairs.  
**Solution**  
Work done = force  $\times$  distance  
 $= (50 \times 10) \times (12 \times 30) + 100 = 500 \times 3.6 = 1,800 \text{ J}$
3. A force of 7.5 N stretches a certain spring by 5 cm. How much work is done in stretching this spring by 8.0 cm?  
**Solution**
