Gordon Brown, 2016-03-02 This book explains why the earliest cities had grid form street systems what conditions led to their being overwhelmingly preferred for 5000 years throughout the world why the Founding Fathers wanted gridform cities and how they affect economic transactions Real property has been instrumental in forming urban settlements for 5000 years but virtually all urban form commentary theory and research has ignored this reality The result is an incomplete and flawed understanding of cities Real property became a means of arranging spatial patterns caused by millennia of human evolutionary and historical developments with respect to access and movement As a result access to resources of all types became a regulatory mechanism controlled at least in part by real property ownership The effects of real property on urban spatial patterns are currently best seen by examining American urban space which has changed significantly over the past 200 years This change which began in the 1840s and established path dependence through a combination of design thought sentimental pastoralism and financial prowess resulted in an urban regime shift that diminished economic resilience This book offers a rethinking of how real property relates to real space examines the thought of form promoters links space property neurological evolution and settlement form shows access is measurable and describes the plusses and minuses of functionalism rent seeking

Handbook of Urban and Community Forestry in the Northeast John E. Kuser, 2013-11-11 With the emergence of urban and community forestry as the fastest growing part of our profession in the last 15 years the need for a book such as this inevitably developed The Society of American Foresters urban forestry working group counts 32 or more universities now offering courses in this subject and the number is growing For the last several years I have coordinated a continuing education urban forestry course at Rutgers for nonmatriculated students Registrants have included arborists shade tree commissioners landscape architects city foresters environmental commissioners park superintendents and others whose jobs involve care and management of trees The course was started by Bob Tate in 1980 around a core of managerial subjects such as inventories budgets and public relations After Bob left in 1984 to join Asplundh and later to start his own prosperous business in California the course languished after it exhausted the local market for those subjects **Nothing Permanent**

Todd Cronan, 2023-06-20 A critical look at the competing motivations behind one of modern architecture's most widely known and misunderstood movements Although mid century modern has evolved into a highly popular and ubiquitous architectural style this term obscures the varied perspectives and approaches of its original practitioners In *Nothing Permanent* Todd Cronan displaces generalizations with a nuanced intellectual history of architectural innovation in California between 1920 and 1970 uncovering the conflicting intentions that would go on to reshape the future of American domestic life Focusing on four primary figures R M Schindler Richard Neutra and Charles and Ray Eames *Nothing Permanent* demonstrates how this prolific era of modern architecture in California rather than constituting a homogenous movement was propelled by disparate approaches and aims Exemplified by the twin pillars of Schindler and Neutra and their respective ideological factions these two groups of architects represent opposing poles of architectural intentionality embodying divergent views about the dynamic between interior and exterior the idea of permanence and the extent to which architects could exercise control over the inhabitants of their structures Looking past California modernism's surface level idealization in present day style guides home decor publications films and television shows *Nothing Permanent* details the intellectual aesthetic and practical debates that lie at the roots of this complex architectural moment Extracting this period from its diffusion into visual culture Cronan argues that mid century architecture in California raised questions about the meaning of architecture and design that remain urgent today *The Routledge Companion to Twentieth and Early Twenty-First Century Urban Design* Jon

Lang, 2020-11-09 *The Routledge Companion to Twentieth and Early Twenty First Century Urban Design* is a fully illustrated descriptive and explanatory history of the development of urban design ideas and paradigms of the past 150 years The ideas and projects hypothetical and built range in scale from the city to the urban block level The focus is on where the generic ideas originated the projects that were designed following their precepts the functions they address and or afford and what we can learn from them The morphology of a city its built environment evolves unselfconsciously as private and

governmental investors self consciously erect buildings and infrastructure in a pragmatic piecemeal manner to meet their own ends Philosophers novelists architects and social scientists have produced myriad ideas about the nature of the built environment that they consider to be superior to those forms resulting from a laissez faire attitude to urban development Rationalist theorists dream of ideal futures based on assumptions about what is good empiricists draw inspirations from what they perceive to be working well in existing situations Both groups have presented their advocacies in manifestoes and often in the form of generic solutions or illustrative designs This book traces the history of these ideas and will become a standard reference for scholars and students interested in the history of urban spaces including architects planners urban historians urban geographers and urban morphologists

Ecopolis Paul F. Downton, 2008-11-19 From 2008 for the first time in human history half of the world's population now live in cities Yet despite a wealth of literature on green architecture and planning there is to date no single book which draws together theory from the full range of disciplines from architecture planning and ecology which we must come to grips with if we are to design future cities which are genuinely sustainable Paul Downton's *Ecopolis* takes a major step along this path It highlights the urgent need to understand the role of cities as both agents of change and means of survival at a time when climate change has finally grabbed world attention and it provides a framework for designing cities that integrates knowledge both academic and practical from a range of relevant disciplines Identifying key theorists practitioners places and philosophies the book provides a solid theoretical context which introduces the concept of urban fractals and goes on to present a series of design and planning tools for achieving Sustainable Human Ecological Development SHED Combining knowledge from diverse fields to present a synthesis of urban ecology the book will provide a valuable resource for students researchers and practitioners in architecture construction planning geography and the traditional life sciences

Planning the Twentieth-century American City Mary Corbin Sies, Christopher Silver, 1996 Arguing that planning in practice is far more complicated than historians usually depict the authors examine closely the everyday social political economic ideological bureaucratic and environmental contexts in which planning has occurred In so doing they redefine the nature of planning practice expanding the range of actors and actions that we understand to have shaped urban development

Contemporary Society John A. Perry, Erna K. Perry, 2015-10-02 This best selling text emphasizes that social and cultural changes are the pervasive realities of our era One of the main themes of Contemporary Society is that the transition from an industrial to a post industrial order in the modern world is fraught with difficulties as was the transition from an agricultural to an industrial order in an earlier era Within this framework we can observe the increasing fragmentation of the social order which tends to lead people away from community and a common purpose and often invites conflict and disunity At the same time countervailing social forces are also at work providing some stability some shelter in the storm Finally societies are faced with the rapid and transformative power of information technology a fact that propels separate groups of people into a global entity Core-Periphery Patterns across the European Union Adelaide Duarte, Gabriela Carmen Pascariu, 2017-08-25 In this new work Pascariu and Duarte along with an international group of acclaimed scholars delve into key challenges currently facing the European Union They analyze the effect of peripherality across the EU regions which will be of great

interest to those countries and regions facing a process of integration

Water Management in Ancient Greek Cities

Dora P. Crouch, 1993-06-24 Focusing on the Mediterranean area where water management is crucial this pioneering study is the first to show how the supply distribution and drainage of water contributed to the urbanization of ancient cities Drawing from classical archaeology the theory and history of urbanization geology and hydraulic engineering Crouch examines water system elements including springs fountains wells channels and drains latrines laundry and dishwashing as they relate to each other and to the physical historical and social bases of ancient Greek cities Studying numerous sites including Pompeii Pergamon Athens Samos Delphi and Corinth she concludes that increased knowledge and skill in management of water contributed directly to the urbanization of the ancient Greek world Illustrated with excellent photographs and line drawings the discussions of supply distribution and drainage of water are organized topically rather than chronologically or by site offering an excellent example of the interdisciplinary approach Crouch's study raises stimulating questions for further research indicates entirely new directions for established academic disciplines and suggests useful procedures for modern cities facing problems of water supply and management
