The Volitional Brain The Volitional Brain:

The Volitional Brain, 1999 *The Volitional Brain* Benjamin Libet, Anthony Freeman, Keith Sutherland, 2000-06-08 It is widely accepted in science that the universe is a closed deterministic system in which everything can ultimately be explained by purely physical causation And yet we all experience ourselves as having the freedom to choose between alternatives presented to us we are in the driving seat The puzzling status of volition is explored in this issue by a distinguished body of scientists and philosophers

Why the Mind Has a Body Charles Augustus Strong, 1903 *Adapted Brains and Imaginary Worlds* Donald Beecher, 2016-02-26 Building bridges between brain science and fictional creations may be literary criticism's most pressing new challenge

The Neuropsychology Of Schizophrenia JOHN P CUTTING, Anthony David, 2019-06-12 Schizophrenia is being increasingly viewed as a neurological disorder The Neuropsychology of Schizophrenia addresses the key questions in modern schizophrenia research How do abnormalities of the brain produce the characteristic signs and symptoms of this most severe and mysterious mental malady Where are these abnormalities How do they develop How can we detect them What clinical and cognitive effects do they have This new book is the first of its kind to tackle these questions in a systematic way from a number of allied perspectives from phenomenology to physiology animal behaviour to metacognition and from PET scans to paper and pencil tests A number of authors from the United Kingdom and the United States have made contributions all are acknowledged experts in the field The chapters each contain a concise review of the particular topic empirical data and also a theoretical overview The Neuropsychology of Schizophrenia will be required reading for all serious students of schizophrenia from both medical and psychology backgrounds

American Phrenological Journal and Life Illustrated, 1909 *Causation and Cognition in Early Modern Philosophy* Dominik Perler, Sebastian Bender, 2019-07-23 This book re-examines the roles of causation and cognition in early modern philosophy The standard historical narrative suggests that early modern thinkers abandoned Aristotelian models of formal causation in favor of doctrines that appealed to relations of efficient causation between material objects and cognizers This narrative has been criticized in recent scholarship from at least two directions Scholars have emphasized that we should not think of the Aristotelian tradition in such monolithic terms and that many early modern thinkers did not unequivocally reduce all causation to efficient causation In line with this general approach this book features original essays written by leading experts in early modern philosophy It is organized around five guiding questions What are the entities involved in causal processes leading to cognition What type(s) or kind(s) of causality are at stake Are early modern thinkers confined to efficient causation or do other types of causation play a role What is God's role in causal processes leading to cognition How do cognitive causal processes relate to other non-cognitive causal processes Is the causal process in the case of human cognition in any way special How does it relate to processes involved in the case of non-human cognition The essays explore how fifteen early modern thinkers answered these questions Francisco Suarez Ren Descartes Louis de la Forge Gaud de

Cordemoy Nicolas Malebranche Thomas Hobbes Baruch de Spinoza Gottfried Wilhelm Leibniz Ralph Cudworth Margaret Cavendish John Locke John Sergeant George Berkeley David Hume and Thomas Reid The volume is unique in that it explores both well known and understudied historical figures and in that it emphasizes the intimate relationship between causation and cognition to open up new perspectives on early modern philosophy of mind and metaphysics *Brains and how to Get Them* Christian Daa Larson,1914 **Models of the Self** Shaun Gallagher,Jonathan Shear,1999 A comprehensive reader on the problem of the self as seen from the perspectives of philosophy development psychology robotics cognitive neuroscience psychopathology semiotics phenomenology and contemplative studies all focused on a keynote paper **Philosophical Series** University of New Mexico,1918 **Mechanical Choices** Michael S. Moore,2020 This book assays how the remarkable discoveries of contemporary neuroscience impact upon our conception of ourselves and our responsibility for our choices and our actions Dramatic and indeed revolutionary changes in how we think of ourselves as agents and as persons are commonly taken to be the implications of those discoveries of neuroscience Indeed the very notions of responsibility and of deserved punishment are thought to be threatened by these discoveries Such threats are collected into four groupings 1 the threat from determinism that neurosciences shoes us that all of our choices and actions are caused by events in the brain that precede choice 2 the threat from epiphenomenalism that our choices are shown by experiment not to cause the actions that are the objects of such choice but are rather mere epiphenomena co effects of common causes in the brain 3 the threat from reductionist mechanism that we and everything we value is nothing but a bunch of two valued switches going off in our brains and 4 the threat from fallibilism 5 that we are not masters in our own house because we lack the privileged knowledge of our own minds needed to be such masters The book seeks to blunt such radical challenges while nonetheless detailing how law morality and common sense psychology can harness the insights of an advancing neuroscience to more accurately assign moral blame and legal punishment to the truly deserving **The Causational and Free Will Theories of Volition** Malcolm Guthrie,1877 **The London Lancet** ,1845 **Efficient Causation** Tad M. Schmaltz,2014-09-26 Causation is now commonly supposed to involve a succession that instantiates some law like regularity Efficient Causation A History examines how our modern notion developed from a very different understanding of efficient causation This volume begins with Aristotle s initial conception of efficient causation and then considers the transformations and reconsiderations of this conception in late antiquity medieval and modern philosophy ending with contemporary accounts of causation It includes four short Reflections that explore the significance of the concept for literature the history of music the history of science and contemporary art theory **Psycho-Physical Dualism Today** Alessandro Antonietti,Antonella Corradini,Jonathan E. Lowe,2008-09-26 Until quite recently mind body dualism has been regarded with deep suspicion by both philosophers and scientists This has largely been due to the widespread identification of dualism in general with one particular version of it the interactionist substance dualism of R n Descartes This traditional form of dualism has ever since its first formulation in the

seventeenth century attracted numerous philosophical objections and is now almost universally rejected in scientific circles as empirically inadequate. During the last few years however renewed attention has begun to be paid to the dualistic point of view as a result of increasing discontent with the prevailing materialism and reductionism of contemporary scientific and philosophical thought. Awareness has grown that dualism need not be restricted to its traditional form and that other varieties of dualism are not subject to the difficulties commonly raised against Descartes own version of it. Interest in these alternative versions of dualism is growing fast today because it seems that they are capable of capturing deep seated philosophical intuitions while also being fully consistent with the methodological assumptions and empirical findings of modern scientific work on the human mind and brain. The object of this book is to provide philosophers scientists their students and the wider general public with an up to date overview of current developments in dualistic conceptions of the mind in contemporary philosophy and science.

Causation and Laws of Nature in Early Modern Philosophy Walter Ott, 2009-09-03. Causation and Laws of Nature in Early Modern Philosophy is a study of one of the most important debates in 17th and 18th century philosophy the nature of causation. Ott offers controversial readings of such canonical figures as Descartes Locke and Hume and explores related topics such as intentionality necessity and relations. **The**

Bereitschaftspotential Marjan Jahanshahi, Mark Hallett, 2012-12-06. Kornhuber and Deecke first recorded and reported the Bereitschaftspotential in 1964. The aim of this book is to bring together in a single volume some of the important research on the Bereitschaftspotential and other movement related cortical potentials and to highlight and address some of the pertinent questions relating to the Bereitschaftspotential and to identify the key issues for future investigation in this field. This book represents a unique compilation of information about the Bereitschaftspotential and related cortical potentials and techniques for measuring preparatory processes in the brain. The book will be of interest to motor physiologists psychologists and neurologists working in clinical or research laboratories.

Estonian Studies in the History and Philosophy of Science Rein Vihalemm, 2012-12-06. The development of geography also forms an interesting chapter in the history of the University of Tartu and in that of Estonian science in general. On the one hand geography is a natural science in the broader sense of the word on the other hand it is a study of human activity. This status of geography makes it particularly sensitive to the cultural and political circumstances under which scholarship and science have developed in Estonia. The article by Professor of Human Geography Ott Kurs born 1939 and historian of science PhD in geography Erki Tamrniksaar born 1969. In Political Draughts Between Science and the Humanities Geography at the University of Tartu. Between the 17th and 20th Centuries is devoted to this topic. Among other things the article states that regular instruction in geography started at the University of Tartu in 1826 when the second chair of geography in Europe was established here. Although the present book does not contain any studies on philosophy at Tartu University in the 19th century I would still like to mention two names. In the early 19th century Kant's philosophy was dominant at Tartu University. One of Kant's pupils Gottlob Benjamin Jasche 1762

1839 who had worked under him as a Privatdozent in Königsberg served as a professor here from 1802-1839. In the history of philosophy he is primarily known as the publisher of Kant's *Logic*. *Conscious Will and Responsibility* Walter Sinnott-Armstrong, Lynn Nadel, 2011. We all seem to think that we do the acts we do because we consciously choose to do them. This commonsense view is thrown into dispute by Benjamin Libet's eyebrow-raising experiments which seem to suggest that conscious will occurs not before but after the start of brain activity that produces physical action. Libet's striking results are often claimed to undermine traditional views of free will and moral responsibility and to have practical implications for criminal justice. His work has also stimulated a flurry of further fascinating scientific research including findings in psychology by Dan Wegner and in neuroscience by John Dylan Haynes that raises novel questions about whether conscious will plays any causal role in action. Critics respond that both commonsense views of action and traditional theories of moral and legal responsibility as well as free will can survive the scientific onslaught of Libet and his progeny. To further this lively debate, Walter Sinnott-Armstrong and Lynn Nadel have brought together prominent experts in neuroscience, psychology, philosophy, and law to discuss whether our conscious choices really cause our actions and what the answers to that question mean for how we view ourselves and how we should treat each other. **In Search of the Soul** Joel B. Green, Stuart L. Palmer, Kevin Corcoran, 2005-01-01. Editors Joel B. Green and Stuart L. Palmer present differing evangelical perspectives on the body and soul, mind and brain problem. Stewart Goetz on substance dualism, William Hasker on emergent dualism, Nancey Murphy on nonreductive physicalism, and Kevin Corcoran on the constitution view of persons.
