Soda Politics Marion Nestle, 2015-09-07 Sodas are astonishing products Little more than flavored sugar water these drinks cost practically nothing to produce or buy yet have turned their makers principally Coca Cola and PepsiCo into a multibillion dollar industry with global recognition distribution and political power Billed as refreshing tasty crisp and the real thing sodas also happen to be so well established to contribute to poor dental hygiene higher calorie intake obesity and type 2 diabetes that the first line of defense against any of these conditions is to simply stop drinking them Habitually drinking large volumes of soda not only harms individual health but also burdens societies with runaway healthcare costs So how did products containing absurdly inexpensive ingredients become multibillion dollar industries and international brand icons while also having a devastating impact on public health In Soda Politics the 2016 James Beard Award for Writing Coca Cola and PepsiCo spend billions of dollars each year to promote their sale to children minorities and low income populations in developing as well as industrialized nations And once they have stimulated that demand they leave no stone unturned to protect profits That includes lobbying to prevent any measures that would discourage soda sales strategically donating money to health organizations and researchers who can make the science about sodas appear confusing and engaging in Corporate Social Responsibility CSR activities to create goodwill and silence critics Soda Politics follows the money trail wherever it leads revealing how hard Big Soda works to sell as much of their products as possible to an increasingly obese world But Soda Politics does more than just diagnose a problem it encourages readers to help find solutions From Berkeley to Mexico City and beyond advocates are successfully countering the relentless marketing promotion and political protection of sugary drinks And their actions are having an impact for all of the hardball and softball tactics the soft drink industry employs to maintain the status quo soda consumption has been flat or falling for years Health advocacy campaigns are now the single greatest threat to soda companies profits Soda Politics provides readers with the tools they need to keep up pressure on Big Soda in order to build healthier and more sustainable food systems

Accounting for livestock water productivity: How and why? Drastig, K., Vellenga, L., Qualitz, G., Singh, R., Pfister, S., Boulay, A.-M., Wiedemann, S., Prochnow, A., Chapagain, A., De Camillis, C., Opio, C. & Mottet, A.,2021-01-22 The assessment of water productivity in livestock supply chains has a critical role to play in developing productive and sustainable food production systems worldwide In particular the evaluation of water productivity improvement options is key to addressing growing food demand and the projected impacts of climate change under conditions where the availability of land and water resources is increasingly limited In this report we review current applications of water productivity analysis in livestock supply chains To do so we analysed 50 livestock water productivity studies carried out in various regions of the world from 1993 to the present time We reviewed the assessment goals system boundaries methodological approaches water flows modelling tools databases livestock species and the main findings in each of the studies We found that there was no consistency in the methods and approaches used to assess water productivity in livestock production chains The studies varied widely in terms of their assessment goals methodology and the sources of water used for the analysis The main

methodological differences were the inclusion or exclusion of background processes such as water input and the treatment of precipitation in accounting for water use in livestock production processes Another key issue was the missing uncertainty assessment which can be classified as input data uncertainty or model uncertainty as well as choice uncertainties The review recommends the further development of guidelines that ensure a consistent and coordinated application of water
