Brain Gain Marc Prensky, 2012-08-07 In an age where the answer to every question is at your fingertips where does the human brain fit in In one hand held object we are able to manage all of our calendars documents and interpersonal relationships with such ease that many people are lost when forced to do perform these tasks without the aid of electronics Often heard are the calls for less technology and more face to face interaction for fear that the use of all this artificial intelligence is dampening our own ability to think Author Marc Prensky has a different idea In this controversial and well argued treatise Prensky offers the idea that rather than stunting the mind that most essential aspect of an individual's intelligence and sense of self smart technology and smart use of technology enhances our humanity in ways that the brain on its own never could Through scores of fascinating examples Prensky shows that the symbiotic combination of the human brain and technology from marrying the brain's strengths such as sense making and complex reasoning abilities with technology's strengths like storing and processing large amounts of data has great benefits for our own cognitive functioning How should we best combine the strengths of mind and machine for maximum benefit Prensky's call is for digital wisdom a new interconnectedness between human and technology that is already enabling Homo Sapiens to begin the journey into the next stages of cognitive evolution
