Human centredness A Challenge to Post industrial Europe The key power in industrial society has been linked to the possession of capital and factory In the information society it could be rather different If one accepts that that the key power in the information society will be linked not so much to the ownership of information but to human creativity nourished by that information the productive force of today and tomorrow could be more and more the human brain Making use of one s intelligence is always accompanied by positive emotion which in turn further activates the intelligence But unfortunately under present conditions workers of all levels live in fear anxiety and stress rather than desire and motivation The question of basic human ecology quality of life is therefore a major strategic factor It is precisely the opposite to the mechanisms of exclusion that currently dominate our society exclusion of young people through joblessness but also exclusion through technology as with the helplessness of older people or the poorly educated confronted with ticket dispensing machines or other automats This is not idle theorizing it corresponds to concrete facts It is for example how some observers interpret the crisis at IBM Because its programs were less human friendly it was shaken to its foundations by Apple and Microsof though it seems since to have learnt its lesson Beyond Broadband Access Richard D. Taylor,Amit M. Schejter,2013-07-01 After broadband access what next What role do metrics play in understanding information societies And more important in shaping their policies Beyond counting people with broadband access how can economic and social metrics inform broadband policies help evaluate their outcomes and create useful models for achieving national goals This timely volume not only examines the

traditional questions about broadband like availability and access but also explores and evaluates new metrics more applicable to the evolving technologies of information access Beyond Broadband Access brings together a stellar array of media policy scholars from a wide range of disciplines economics law policy studies computer science information science and communications studies Importantly it provides a well rounded international perspective on theoretical approaches to databased communications policymaking in the Americas Europe Asia and Africa Showcasing a diversity of approaches this invaluable collection helps to meet myriad challenges to improving the foundations for communications policy development

Innovation Networks and Learning Regions?

James Simme, 2004-08-02 Innovation Networks and Learning Regions address key issues of understanding in contemporary economic geography and local economic policy making in cities and regions in the advanced economies Developing the idea that innovation is the primary driving force behind economic change and growth the international range of contributors stress the importance of knowledge and information as the raw materials of innovation They examine the ways in which these elements may be acquired and linked through networks and demonstrate that there are empirical examples of innovative areas which do not have highly developed networks yet appear to be relatively successful in terms of local economic growth In so doing they raise crucial questions about the ways in which regions or localities might be described as truly learning areas and about the sustainability of future economic and quality of life success based on innovation and high technology

The Management of Information and Communication Technologies Robin Mansell, 1994

Laser Satellite Communication William H. Mott IV, Robert Sheldon, 2000-01-30 This introduction to the next generation of human telecommunications enterprise examines the development of laser satellite communications and describes its advantages over previous technologies It looks at the development of the technology and the industry through

wired and wireless media and presents the vision promise and challenges of free space lasers The book balances its focused consideration of the telecommunications industry and markets with practical thoughts on creating a business involved in the introduction of commercial laser satellite communications systems Scholars investors venture capitalists policy makers and corporate leaders will find this to be a comprehensive and eye opening bridge between the existing telecommunications industry and the opportunities of the next generation The opening chapters introduce the concepts of Migration Specialization and Interconnectivity as solutions inherent in third generation laser satellite communications The high capacity of the optical spectrum invites migration of applications beyond the narrow RF spectra to the high frequencies of free space laser beams Migration stimulates specialization of voice and duplex at the lower optimal RF spectra The third generation laser wired space focuses around global satellite interconnectivity between fiber optics and RF The final chapters introduce a model business concept to pioneer the third generation Several approaches to capitalization organization technology development and business strategies provide an exciting stimulus for pragmatic approaches to commercial concepts **Telecommunications Update , The People's Right To Know** Frederick Williams,John V.

Pavlik,2013-09-13 This important volume presents the pros and cons of a national service that will meet the information needs and wants of all people In the preface Everette E Dennis Executive Director of The Freedom Forum Media Studies Center asks What will a true information highway where most citizens enjoy a wide range of information services on demand do to local communities government and business entities other units of society and democracy itself It is no longer a question of whether a vastly expanded information highway will be built in America Telephone and cable companies have already inaugurated their plans and government will most likely incorporate such plans into the economic development policy of the late 1990s The key questions remaining are Who will pay for it and Whom exactly will it serve The People s Right to Know suggests that serving the everyday citizen should be the main objective of any national initiatives in this area It counsels that evolving electronic services are new communications media that should be deployed with a main focus on the public s needs interests and desires If advances in the nation s public telephone network will make information services as easy to use as ordinary voice calls or newspapers promise vast new electronic services awaiting their readers more attention must also be devoted to the information needs and wants of everyday citizens In our increasingly multicultural and technology driven society enormous inequities exist across America s socioeconomic classes regarding access to information critical to everyday life If an information highway is to be effective we need to ensure that all Americans have access to it its design must start with the everyday citizen This powerful new medium at our disposal must consider policy that includes attempts to close the information gap among our citizens It must ensure equal access to data regarding job education and health information services legal information on such topics as immigration and transactional services that offer assistance on such routine but time consuming tasks as renewing a driver s license or registering to vote Media and telecommunications

professionals communication scholars and policymakers including two former chairmen of the Federal Communications Commission provide insights and pointed commentary on the nature and shape of an information highway designed as a new public medium aimed at serving a wide range of public needs Their work should improve our basis for deciding if there are means by which an enhanced public telecommunications network can benefit the everyday working American

The Metabolist Imagination William O. Gardner, 2020-04-14 Japan's postwar urban imagination through the Metabolism architecture movement and visionary science fiction authors The devastation of the Second World War gave rise to imaginations both utopian and apocalyptic In Japan a fascinating confluence of architects and science fiction writers took advantage of this space to begin remaking urban design In *The Metabolist Imagination* William O Gardner explores the unique Metabolism movement which allied with science fiction authors to foresee the global cities that would emerge in the postwar era This first comparative study of postwar Japanese architecture and science fiction builds on the resurgence of interest in Metabolist architecture while establishing new directions for exploration Gardner focuses on how these innovators created unique versions of shared concepts including futurity megastructures capsules and cybercities making lasting contributions that resonate with contemporary conversations around cyberpunk climate change anime and more *The Metabolist Imagination* features original documentation of collaborations between giants of postwar Japanese art and architecture such as the landmark 1970 Osaka Expo It also provides the most sustained English language discussion to date of the work of Komatsu Saky considered one of the big three authors of postwar Japanese science fiction These studies are underscored by Gardner's insightful approach treating architecture as a form of speculative fiction while positioning science fiction as an intervention into urban design making it a necessary read for today's visionaries

Fernsehkultur Ingo Köster, 2008 *Quantum Ecology* Stefano Calzati, Derrick De Kerckhove, 2024-11-12 An exploration of the emerging quantum technological paradigm and its effects on human consciousness and cultures In *Quantum Ecology* Stefano Calzati and Derrick de Kerckhove identify three technological ecologies linguistic digital and quantum to better understand today's shattered globalized contemporaneity and navigate the impact of soon to come quantum information technologies Today's societies based as they are on language and writing face disruption brought on by digital transformation which is not predicated on sharing meaning but on sheer computability This produces what the authors call an epistemological crisis From here the book explores how emerging quantum computers and communication will trigger an even deeper existential shift based on quantum physics principles of discreteness uncertainty and entanglement Enriched with evidence from biology anthropology sociolinguistics and information and cognitive sciences the authors draw upon diverse case studies to sustain a convincing philosophical and political argument The book's chapters move from a discussion about the coevolution of humans and language to the codependence of writing thinking and innovation then proceed to investigate datacracy the power of algorithms Finally the authors outline the looming psychocultural effects and geopolitical challenges of the nascent quantum

technological paradigm **Books in Series, 1876-1949** R.R. Bowker Company, 1982 *Proceedings of the ACSA Annual Meeting* Association of Collegiate Schools of Architecture, 1993
