WITH SPEED AND VIOLENCE

WHY SCIENTISTS FEAR TIPPING POINTS IN CLIMATE CHANGE

WITH A NEW PREFACE

"In the face of massive disinformation about climate change, what is a citizen to do? Read *With Speed and Violence* . . . A gripping, highly readable book—perhaps the best discussion of climate change for lay readers."

With Speed And Violence Why Scientists Fear Tipping Points In Climate Change:

With Speed and Violence Fred Pearce, 2007-03-15 Nature is fragile environmentalists often tell us But the lesson of this book is that it is not so The truth is far more worrying Nature is strong and packs a serious counterpunch Global warming will very probably unleash unstoppable planetary forces And they will not be gradual The history of our planet s climate shows that it does not do gradual change Under pressure whether from sunspots or orbital wobbles or the depredations of humans it lurches virtually overnight from the Introduction Fred Pearce has been writing about climate change for eighteen years and the more he learns the worse things look Where once scientists were concerned about gradual climate change now more and more of them fear we will soon be dealing with abrupt change resulting from triggering hidden tipping points Even President Bush s top climate modeler Jim Hansen warned in 2005 that we are on the precipice of climate system tipping points beyond which there is no redemption As Pearce began working on this book normally cautious scientists beat a path to his door to tell him about their fears and their latest findings With Speed and Violence tells the stories of these scientists and their work from the implications of melting permafrost in Siberia and the huge river systems of meltwater beneath the icecaps of Greenland and Antarctica to the effects of the ocean conveyor and a rare molecule that runs virtually the entire cleanup system for the planet Above all the scientists told him what they re now learning about the speed and violence of past natural climate change and what it portends for our future With Speed and Violence is the most up to date and readable book yet about the growing evidence for global warming and the large climatic effects it may unleash **Climate Change**

and Society John Urry, 2011-06-20 This is the first book to develop a proper sociology of climate change and will be an excellent companion to Tony Giddens The Politics of Climate Change Why We Disagree about Climate Change Mike Hulme, 2009-04-30 Climate change is not a problem waiting for a solution It is an environmental cultural and political phenomenon which is re shaping the way we think about ourselves our societies and humanity s place on Earth Drawing upon twenty five years of professional work as an international climate change scientist and public commentator Mike Hulme provides a unique insider s account of the emergence of this phenomenon and the diverse ways in which it is understood He uses different standpoints from science economics faith psychology communication sociology politics and development to explain why we disagree about climate change In this way he shows that climate change far from being simply an issue or a threat can act as a catalyst to revise our perception of our place in the world Why We Disagree About Climate Change is an important contribution to the ongoing debate over climate change and its likely impact on our lives **Crime, Violence,**

and Global Warming John Crank, Linda Jacoby, 2015-05-20 Crime Violence and Global Warming introduces the many connections between climate change and criminal activity Conflict over natural resources can escalate to state and non state actors resulting in wars asymmetrical warfare and terrorism Crank and Jacoby apply criminological theory to each aspect of this complicated web helping readers to evaluate conflicting claims about global warming and to analyze evidence of the

current and potential impact of climate change on conflict and crime Beginning with an overview of the science of global warming the authors move on to the links between climate change scarce resources and crime Their approach takes in the full scope of causes and consequences present and future in the United States and throughout the world The book concludes by looking ahead at the problem of forecasting future security implications if global warming continues or accelerates This fresh approach to the criminology of climate change challenges readers to examine all sides of this controversial question and to formulate their own analysis of our planet s future

Plants and Insects Stephen Aitken,2013-08-01 Readers will learn that the ability of plants and insects to reproduce and expand their ranges is affected by changes in temperature and precipitation The timing between insect pollinators and the flowering plants is also impacted by climate change We need to conserve the delicate balance in our ecosystems as carbon dioxide levels rise even further

Systematic Theology and Climate Change Michael S. Northcott,Peter M. Scott,2014-06-05 This book offers the first comprehensive systematic theological reflection on arguably the most serious issue facing humanity and other creatures today Responding to climate change is often left to scientists policy makers and activists but what understanding does theology have to offer In this collection the authors demonstrate that there is vital cultural and intellectual work for theologians to perform in responding to climate science and in commending a habitable way forward Written from a range of denominations and traditions yet with ecumenical intent the authors explore key Christian doctrines and engage with some of

the profound issues raised by climate change Key questions considered include What may be said about the goodness of creation in the face of anthropogenic climate change And how does theology handle a projected future without the human The volume provides students and scholars with fascinating theological insight into the complexity of climate change

Climate Machines, Fascist Drives, and Truth William E. Connolly, 2019-09-06 In this new installation of his work William E Connolly examines entanglements between volatile earth processes and emerging cultural practices highlighting relays among extractive capitalism self amplifying climate processes migrations democratic aspirations and fascist dangers In three interwoven essays Connolly takes up thinkers in the minor tradition of European thought who unlike Cartesians and Kantians cross divisions between nature and culture He first offers readings of Sophocles and Mary Shelley asking whether close attention to the Anthropocene could perhaps have arrived earlier had subsequent humanists absorbed their lessons He then joins Deleuze and Guattari's notion of an abstract machine with contemporary earth sciences doing so to compare the Antique Little Ice Age of the late Roman empire to contemporary relays between extractive capitalism and accelerating climate processes The final essay stages a dramatic dialogue between Alfred North Whitehead and Michel Foucault about the pursuit of truth during a time of planetary turbulence With Climate Machines Fascist Drives and Truth Connolly forges incisive interventions into key issues of our time

Climate Change and Future Justice Catriona McKinnon, 2012-03-12 Climate change creates unprecedented problems of intergenerational justice What do members of the current generation owe to future generations in virtue of the contribution they are making to climate change Providing important new insights within the theoretical framework of political liberalism Climate Change and Future Justice presents arguments in three key areas Mitigation the current generation ought to adopt a strong precautionary principle in formulating climate change policy in order to minimise the risks of serious harm from climate change imposed on future generations Adaptation the current generation ought to create a fund to which members of future generations may apply for compensation if the risks of climate change harm imposed on them by the current generation ripen into harms Triage future generations ought to keep alive hope for a return to the framework of justice for the social cooperation of future people less burdened by climate change harms This work presents agenda setting applications of important principles of democratic equality to the most serious set of political challenges ever faced by human society It should be required reading for political theorists and environmental philosophers

Trajectory of the 21st Century Lawrence J. Terlizzese, 2009-01-10 *Trajectory of the Twenty first Century* explores what many prophets of the twentieth century such as Oswald Spengler Paul Tillich Aldous Huxley Jacques Ellul and others have predicted would transpire in the current century Their vision included an out of control technological system and a return to religious sentiment that will ultimately undermine the system to which it is reacting This book aims to accurately present their positions and draw certain logical conclusions from them that pertain to the course of history in our time The book's theme argues that modernity is a secularized version of millennial Christianity which reaches its fullest development

in the twenty first century and will regress into what Russian philosopher Nicholas Berdyaev called the new Middle Ages or a new religious period This will mean the twilight of modern technological society as its values of rationalism give way to a post-rationalist society Ironically decline will come through further technological advance Omnicide threatens through religious world war driven by transcendent values and modern weaponry Jihadist thinking and posthumanist technology both establish the omnicidal mentality New technologies such as genetic engineering and artificial intelligence created under millennial inspiration to reach for immortality could potentially bring an end to the human species either through a slow steady obsolescence or through environmental catastrophe The titanic forces of technological progress and regress are on a direct collision course in the twenty first century

How to Think about the Climate Crisis Graham Parkes, 2020-11-26
Choice Outstanding Academic Title 2021 Coping with the climate crisis is the greatest challenge we face as a species We know the main task is to reduce our emissions as rapidly as possible to minimise the harm to the world's population now and for generations to come What on earth can philosophy offer us In this compelling account of a problem we think we know inside out the philosopher Graham Parkes outlines the climatic predicament we are in and how we got here and explains how we can think about it anew by considering the relevant history science economics politics and for the first time the philosophies underpinning them Introducing the reality of global warming and its increasingly dire consequences he identifies the immediate obstructions to coping with the problem outlines the libertarian ideology behind them and shows how they can be circumvented Drawing on the wisdom of the ancients in both the East Asian and Western traditions as embodied in such figures as Confucius Laozi Zhuangzi Dogen Plato Epicurus Marcus Aurelius and Nietzsche Parkes shows how a greater awareness of non-Western philosophies and especially the Confucian political philosophy advocated by China can help us deal effectively with climate change and thrive in a greener future If some dominant Western philosophical ideas and their instantiation in politics and modern technology got us into our current crisis Parkes demonstrates persuasively that expanding our philosophical horizons will surely help get us out

The Community Resilience Reader Daniel Lerch, 2017-10-12 National and global efforts have failed to stop climate change transition from fossil fuels and reduce inequality We must now confront these and other increasingly complex problems by building resilience at the community level The Community Resilience Reader combines a fresh look at the challenges humanity faces in the 21st century the essential tools of resilience science and the wisdom of activists scholars and analysts working on the ground to present a new vision for creating resilience It shows that resilience is a process not a goal how it requires learning to adapt but also preparing to transform and that it starts and ends with the people living in a community From Post Carbon Institute the producers of the award-winning The Post Carbon Reader The Community Resilience Reader is a valuable resource for community leaders college students and concerned citizens

Sustainable Urban Development Reader Stephen M. Wheeler, Timothy Beatley, 2014-10-03 Building on the success of its second edition the third edition of the Sustainable Urban

Development Reader provides a generous selection of classic and contemporary readings giving a broad introduction to this topic. It begins by tracing the roots of the sustainable development concept in the nineteenth and twentieth centuries before presenting readings on a number of dimensions of the sustainability concept. Topics covered include land use and urban design, transportation, ecological planning and restoration, energy and materials use, economic development, social and environmental justice, and green architecture and building. All sections have a concise editorial introduction that places the selection in context and suggests further reading. Additional sections cover tools for sustainable development, international sustainable development, visions of sustainable community, and case studies from around the world. The book also includes educational exercises for individuals, university classes, or community groups and an extensive list of recommended readings. The anthology remains unique in presenting a broad array of classic and contemporary readings in this field, each with a concise introduction placing it within the context of this evolving discourse. The Sustainable Urban Development Reader presents an authoritative overview of the field using original sources in a highly readable format for university classes in urban studies, environmental studies, the social sciences, and related fields. It also makes a wide range of sustainable urban planning-related material available to the public in a clear and accessible way, forming an indispensable resource for anyone interested in the future of urban environments.

The Ethos of the Climate Event Kellan Anfinson, 2020-12-31 This book develops a politico-ethical response to climate change that accounts for the novelty and uncertainty that it entails. This volume explores the ethical dimensions of climate change and posits that one must view it as a social construction intimately tied to political issues in order to understand and overcome this environmental challenge. To show how this ethos builds upon the need for new forms of responsiveness, Anfinson analyzes it in terms of four features: commitment, worldly sensitivity, political disposition, and practice. Each of these features is developed by putting four thinkers—Kierkegaard, Nietzsche, Schmitt, and Foucault—respectively in conversation with the literature on climate change. In doing so, this book shows how social habits and norms can be transformed through subjective thought and behavior in the context of a global environmental crisis. Presenting a multidisciplinary engagement with the politics, philosophy, and science of climate change, this book will be of great interest to students and scholars of climate change, environmental politics, environmental philosophy, and environmental humanities.

Paul J. Crutzen and the Anthropocene: A New Epoch in Earth's History Susanne Benner, Gregor Lax, Paul J. Crutzen, Ulrich Pöschl, Jos Lelieveld, Hans Günter Brauch, 2022-01-01 This book outlines the development and perspectives of the Anthropocene concept by Paul J. Crutzen and his colleagues from its inception to its implications for the sciences, humanities, society, and politics. The main text consists primarily of articles from peer-reviewed scientific journals and other scholarly sources. It comprises selected articles on the Anthropocene published by Paul J. Crutzen and a selection of related articles, mostly but not exclusively by colleagues with whom he collaborated closely. In the year 2000, Nobel Laureate Paul J. How Soon is Now Daniel Pinchbeck, 2017-02-21 We are on the brink of an ecological mega crisis threatening the future of life on earth and our actions over the next few years may well determine the destiny of our descendants Between a manifesto and a tactical plan of action How Soon is Now by radical futurist and philosopher Daniel Pinchbeck outlines a vision for a mass social movement that will address this crisis Drawing on a huge range of resources and references Daniel Pinchbeck presents a compelling argument for the need for change on a global basis it is only when we see ourselves as one planetary tribe that this change can occur The central thesis is that humanity has self willed the ecological crisis in order to bring about the necessary conditions for transcendence of our current state of being by undergoing an initiatory ordeal on a planetary scale This collective ordeal is necessary for us to evolve from one state of being our current level of consciousness to the next By passing through this initiation we realize ourselves as one unified being a planetary super organism in a symbiotic relationship with the Earth s ecology and the entire web of life Covering everything from energy and agriculture to culture politics media and ideology Pinchbeck s book is ultimately about the nature of the human soul and the future of our current world He calls for an intentional and consciously designed metamorphosis of our current systems which transform capitalist and exclusive structures into participatory democratic and inclusive ones based on an integration of Eastern metaphysics social ecology and radical political thought How Soon is Now gives us the context we need to understand the chaos and turbulence of our times Sting
