Made in Brooklyn

Amanda Wasielewski, 2018-06-29 Made in Brooklyn provides a belated critique of the Maker Movement from its origins in the nineteenth century to its impact on labor and its entanglement in the neoliberal economic model of the tech industry This critique is rooted in a case study of one neighborhood in Brooklyn where artists occupy former factory buildings as makers Although the Maker Movement promises to revitalize the city and its dying industrial infrastructure by remaking these areas as centers of small scale production it often falls short of its utopian ideals Through her analysis of the Maker Movement the author addresses broader questions around the nature of artistic work after the internet as well as what the term hipster means in the context of youth culture gentrification labor and the influence of the internet Part history part ethnography this book is an attempt to provide a unified analysis of how the tech industry has infiltrated artistic practice and urban space

Transcending the Speed of Light Marc Seifer, 2008-08-13 A study of the new scientific understanding of consciousness and the mind as a fifth dimension of reality Introduces the existence of a fifth dimension one of mind an inner or hyperspace where time is transcended Shows how the barrier of the speed of light is actually a gateway demarking the fifth dimension Since the introduction of Descartes dualism in the seventeenth century the mind and the physical world have been viewed as disconnected entities Yet qualities of mind such as awareness purposeful action organization design and even decision making are present within the structure of matter and within the dimensions of space and time The space time continuum of scientists generally ignores the realm of the mind though phenomena such as imaginary numbers used by Einstein to combine space with time are concepts that only exist in the mind Marc Seifer contends that the inadequacy of four dimensional models to account for our experience of mental phenomena points to the consciousness of the mind as a higher organizing principle a fifth dimension where thoughts are as real and quantifiable as our familiar physical world He shows that because thought enables us to move backward and forward through time reflecting on the past and making plans for the future this fifth dimension of mind breaks the laws of relativity thereby transcending the speed of light His extensive study of this fifth dimension ranges from relativity and ether theory to precognition telepathy and synchronicity all from the perspective of the conscious universe

[The Martians](#) David Baron, 2025-08-26 Long before NASA began contemplating a visit to our neighboring world a turn of the century Mars craze invaded the public s imagination here thrillingly retold in David Baron s *The Martians There Is Life on the Planet Mars* New York Times December 9 1906 This New York Times headline was no joke In the early 1900s many Americans actually believed we had discovered intelligent life on Mars as best selling science writer David Baron chronicles in *The Martians* his truly bizarre tale of a nation swept up in Mars mania At the center of Baron s historical drama is Percival Lowell the Boston Brahmin and Harvard scion who observed canals etched into the surface of Mars Lowell devised a grand theory that the red planet was home to a utopian society that had built gargantuan ditches to funnel precious meltwater from the polar icecaps to desert farms and oasis cities The public fell in love with the ambitious amateur astronomer who shared his findings in speeches and wildly popular books While at

first people treated the Martians whimsically Martians headlining Broadway shows biologists speculating whether they were winged or gilled the discussion quickly became serious Inventor Nikola Tesla announced he had received radio signals from Mars Alexander Graham Bell agreed there was no escape from the conviction that intelligent beings inhabited the planet Martian excitement reached its zenith when Lowell financed an expedition to photograph Mars from Chile's Atacama Desert resulting in what newspapers hailed as proof of the Martian canals existence Triumph quickly yielded to tragedy Those wild claims and highly speculative photographs emboldened Lowell's critics whose withering attacks gathered steam and eventually wrecked the man and his theory but not the fervor he had started Although Lowell would die discredited and delusional in 1916 the Mars frenzy spurred a nascent literary genre called science fiction and the world's sense of its place in the universe would never be the same Today the red planet maintains its grip on the public's imagination Many see Mars as civilization's destiny the first step toward our becoming an interplanetary species but as David Baron demonstrates this tendency to project our hopes onto the world next door is hardly new The Martians is a scintillating and necessary reminder that while we look to Mars for answers what we often find are mirrors of ourselves Brilliant Jane Brox, 2010-06-29 This superb history of artificial light traces the evolution of society invariably fascinating and often original it amply lives up to its title Publishers Weekly starred review In Brilliant Jane Brox explores humankind's ever changing relationship to artificial light from the stone lamps of the Pleistocene to the LEDs embedded in fabrics of the future More than a survey of technological development this sweeping history reveals how artificial light changed our world and how those social and cultural changes in turn led to the pursuit of more ways of spreading maintaining and controlling light Brox plumbs the class implications of light who had it who didn't through the centuries when crude lamps and tallow candles constricted waking hours She identifies the pursuit of whale oil as the first time the need for light thrust us toward an environmental tipping point Only decades later gas street lights opened up the evening hours to leisure which changed the ways we live and sleep and the world's ecosystems Edison's bulbs produced a light that seemed to its users all but divorced from human effort or cost And yet as Brox's informative portrait of our current grid system shows the cost is ever with us Brilliant is infused with human voices startling insights and timely questions about how our future lives will be shaped by light
