The Visual Story Seeing The Structure Of Film Tv And New Media:

The Visual Story Bruce Block, 2013-04-02 If you can't make it to one of Bruce Block's legendary visual storytelling seminars then you need his book. Now in full color for the first time this best seller offers a clear view of the relationship between the story script structure and the visual structure of a film, video, animated piece or video game. You'll learn how to structure your visuals as carefully as a writer structures a story or a composer structures music. Understanding visual structure allows you to communicate moods and emotions and most importantly reveals the critical relationship between story structure and visual structure. The concepts in this book will benefit writers, directors, photographers, production designers, art directors and editors who are always confronted by the same visual problems that have faced every picture maker in the past, present and future.

The Visual Story Bruce A. Block, 2001 The Visual Story offers students and professionals in cinematography, production design, directing and screenwriting a clear view of the relationship between the story script structure and the visual structure of a film or video. An understanding of the visual components will serve as the guide in the selection of locations, set dressing, props, wardrobe, lenses, camera positions, lighting, actor staging and editorial choices. The Visual Story divides what is seen on screen into tangible sections: contrast and affinity, space, line and shape, tone, color, movement and rhythm. The vocabulary as well as the insight is provided to purposefully control the given components to create the ultimate visual story. For example, know that a saturated yellow will always attract a viewer's eye first, decide to avoid abrupt editing by mastering continuum of movement and benefit from the suggested list of films to study rhythmic control. The Visual Story shatters the wall between theory and practice, bringing these two aspects of the craft together in an essential connection for all those creating visual stories.

Producing and Directing the Short Film and Video Peter W. Rea, David K. Irving, 2015-03-24 Producing and Directing the Short Film and Video Fifth Edition is the definitive book on the subject for the serious film student or beginning filmmaker. Its unique two-fold approach looks at filmmaking from the perspectives of both the producer and director and clearly explains how their separate roles must work together to create a successful short film or video. Through extensive examples from award-winning shorts and insightful interviews you will learn about common challenges the filmmakers encountered during each step of the filmmaking process from preproduction to production, postproduction and distribution and the techniques they used to overcome them. In celebrating this book's twentieth anniversary, this edition has been updated to include two all-new in-depth case studies of esteemed short films: *Memory Lane* and the Academy Award-winning *God of Love*. A revised chapter progression that reinforces the significance of the actor-director relationship. Interviews with the filmmakers integrated alongside the text as well as new images and behind-the-scenes coverage of production processes. Revamped sections on current financing strategies, postproduction workflows and the wide variety of distribution platforms now available to filmmakers. A Where Are They Now appendix featuring updates on

the original filmmakers covered in the first edition An expanded companion website www.focalpress.com/cw/rea containing useful forms and information on distributors grants and financing sources film and video festivals film schools internet sources for short works and professional associations

Traditionally scientific fields have defined boundaries and scientists work on research problems within those boundaries. However from time to time those boundaries get shifted or blurred to evolve new fields. For instance the original goal of computer vision was to understand a single image of a scene by identifying objects their structure and spatial arrangements. This has been referred to as image understanding. Recently computer vision has gradually been making the transition away from understanding single images to analyzing image sequences or video. Video understanding deals with understanding of video understanding sequences e.g. recognition of gestures activities facial expressions etc. The main shift in the classic paradigm has been from the recognition of static objects in the scene to motion based recognition of actions and events. Video understanding has overlapping research problems with other fields therefore blurring the fixed boundaries. Computer graphics image processing and video databases have obvious overlap with computer vision. The main goal of computer graphics is to generate and animate realistic looking images and videos. Researchers in computer graphics are increasingly employing techniques from computer vision to generate the synthetic imagery. A good example of this is image based rendering and modeling techniques in which geometry appearance and lighting is derived from real images using computer vision techniques. Here the shift is from synthesis to analysis followed by synthesis. Image processing has always overlapped with computer vision because they both inherently work directly with images.
