Universal Artificial Intelligence Marcus Hutter, 2005-12-29 Personal motivation The dream of creating artificial devices that reach or outperform human intelligence is an old one It is also one of the dreams of my youth which have never left me What makes this challenge so interesting A solution would have enormous implications on our society and there are reasons to believe that the AI problem can be solved in my expected lifetime So it's worth sticking to it for a lifetime even if it takes 30 years or so to reap the benefits The AI problem The science of artificial intelligence AI may be defined as the construction of intelligent systems and their analysis A natural definition of a system is anything that has an input and an output stream Intelligence is more complicated It can have many faces like creativity solving problems pattern recognition classification learning induction deduction building analogies optimization surviving in an environment language processing and knowledge A formal definition incorporating every aspect of intelligence however seems difficult Most if not all known facets of intelligence can be formulated as goal driven or more precisely as maximizing some utility function It is therefore sufficient to study goal driven AI e.g. the biological goal of animals and humans is to survive and spread The goal of AI systems should be to be useful to humans

An Introduction to Universal Artificial Intelligence Marcus Hutter, David Quarel, Elliot Catt, 2024-05-28 An Introduction to Universal Artificial Intelligence provides the formal underpinning of what it means for an agent to act intelligently in an unknown environment First presented in Universal Algorithmic Intelligence Hutter 2000 UAI offers a framework in which virtually all AI problems can be formulated and a theory of how to solve them UAI unifies ideas from sequential decision theory Bayesian inference and algorithmic information theory to construct AIXI an optimal reinforcement learning agent that learns to act optimally in unknown environments AIXI is the theoretical gold standard for intelligent behavior The book covers both the theoretical and practical aspects of UAI Bayesian updating can be done efficiently with context tree weighting and planning can be approximated by sampling with Monte Carlo tree search It provides algorithms for the reader to implement and experimental results to compare against These algorithms are used to approximate AIXI The book ends with a philosophical discussion of Artificial General Intelligence Can super intelligent agents even be constructed Is it inevitable that they will be constructed and what are the potential consequences This text is suitable for late undergraduate students It provides an extensive chapter to fill in the required mathematics probability information and computability theory background You can also visit the author website <http://www.hutter1.net/ai/uaibook2.htm>

Artificial General Intelligence Ben Goertzel, Cassio Pennachin, 2007-01-17 Only a small community has

concentrated on general intelligence No one has tried to make a thinking machine The bottom line is that we really haven't progressed too far toward a truly intelligent machine We have collections of dumb specialists in small domains the true majesty of general intelligence still awaits our attack We have got to get back to the deepest questions of AI and general intelligence Marvin Minsky as interviewed in Hal's Legacy edited by David Stork 2000 Our goal in creating this edited volume has been to fill an apparent gap in the scientific literature by providing a coherent presentation of a body of contemporary research that in spite of its integral importance has hitherto kept a very low profile within the scientific and intellectual community This body of work has not been given a name before in this book we christen it Artificial General Intelligence AGI What distinguishes AGI work from run of the mill artificial intelligence research is that it is explicitly focused on engineering general intelligence in the short term We have been active researchers in the AGI field for many years and it has been a pleasure to gather together papers from our colleagues working on related ideas from their own perspectives In the

Introduction we give a conceptual overview of the AGI field and also summarize and interrelate the key ideas of the papers in the subsequent chapters

Adaptive Agents and Multi-Agent Systems II Daniel Kudenko, Dimitar Kazakov, Eduardo Alonso, 2005-03-04 Adaptive agents and multi agent systems is an emerging and exciting interdisciplinary area of research and development involving artificial intelligence software engineering and developmental biology as well as cognitive and social science This book presents 17 revised and carefully reviewed papers taken from two workshops on the topic as well as 2 invited papers by leading researchers in the area The papers deal with various aspects of machine learning adaptation and evolution in the context of agent systems and autonomous agents

Robotics, AI, and Humanity Joachim von Braun, Margaret S. Archer, Gregory M. Reichberg, Marcelo Sánchez Sorondo, 2021-02-12 This open access book examines recent advances in how artificial intelligence AI and robotics have elicited widespread debate over their benefits and drawbacks for humanity The emergent technologies have for instance implications within medicine and health care employment transport manufacturing agriculture and armed conflict While there has been considerable attention devoted to robotics AI applications in each of these domains a fuller picture of their connections and the possible consequences for our shared humanity seems needed This volume covers multidisciplinary research examines current research frontiers in AI robotics and likely impacts on societal well being human robot relationships as well as the opportunities and risks for sustainable development and peace The attendant ethical and religious dimensions of these technologies are addressed and implications for regulatory policies on the use and future development of AI robotics technologies are elaborated
