Universities In The Marketplace The Commercialization Of Higher Education:

Universities in the Marketplace Derek Bok, 2009-02-14 Is everything in a university for sale if the price is right In this book one of America's leading educators cautions that the answer is all too often yes Taking the first comprehensive look at the growing commercialization of our academic institutions Derek Bok probes the efforts on campus to profit financially not only from athletics but increasingly from education and research as well He shows how such ventures are undermining core academic values and what universities can do to limit the damage Commercialization has many causes but it could never have grown to its present state had it not been for the recent rapid growth of money making opportunities in a more technologically complex knowledge based economy A brave new world has now emerged in which university presidents enterprising professors and even administrative staff can all find seductive opportunities to turn specialized knowledge into profit Bok argues that universities faced with these temptations are jeopardizing their fundamental mission in their eagerness to make money by agreeing to more and more compromises with basic academic values He discusses the dangers posed by increased secrecy in corporate funded research for profit Internet companies funded by venture capitalists industry subsidized educational programs for physicians conflicts of interest in research on human subjects and other questionable activities While entrepreneurial universities may occasionally succeed in the short term reasons Bok only those institutions that vigorously uphold academic values even at the cost of a few lucrative ventures will win public trust and retain the respect of faculty and students Candid evenhanded and eminently readable *Universities in the Marketplace* will be widely debated by all those concerned with the future of higher education in America and beyond

Transformations in Research, Higher Education and the Academic Market Sharon Rider, Ylva Hasselberg, Alexandra Waluszewski, 2012-12-30 This volume tackles head on the controversy regarding the tensions between the principles underlying Academe on the one hand and the free market on the other Its outspoken thesis posits that seemingly irresistible institutional pressures are betraying a core principle of the Enlightenment that the free pursuit of knowledge is of the highest value in its own right As market principles are forced on universities inducing a neoteric culture of managerialism many worry that the very characteristics that made European higher education in particular such a success are being eroded and replaced by ideological opportunism and economic expediency Richly interdisciplinary the anthology explores a wealth of issues such as the phenomenon of bibliometrics linking an institution's success to the volume and visibility of publications produced Many argue that the use of such indicators to measure scientific value is inimical to the time consuming complexities of genuine truth seeking A number of the greatest discoveries and innovations in the history of science such as Newton's laws of mechanics or the Mendelian laws of inheritance might never have seen the light of day if

today's system of determining and defining the form and content of science had dominated. With analytical perspectives from political science, economics, philosophy, and media studies, the collection interrogates for example the doctrine of graduate employability that exerts such a powerful influence on course type and structure, especially on technical and professional training. In contrast, the liberal arts must choose between adaptation to the dictates of employability strategies or wither away as enrollments dwindle and resources evaporate. Research projects and aims have also become an area of controversy with many governments now assessing the value of proposals in terms of assumed commercial benefits. The contributors argue that these changes, as well as reforms in the managerial and administrative structures in tertiary education, constitute a radical break with the previous ontology of science and scholarship, a change in its very character and not merely its form. It shows that the scientific thinking students, researchers, and scholars are encouraged to adopt is undergoing a rapid shift in conceptual content with significant consequences not only for science but also for the society of which it is a part.

Modern Work and the Marketisation of Higher Education Gerbrand Tholen, 2022-09-08 Over recent decades, national Higher Education sectors across the world have experienced a gradual process of marketisation. This book offers a new interpretation on why and how marketisation has taken place within England. It explores distinct assumptions on the nature of graduate work and how the graduate labour market drives the argumentation for more market and choice. Demonstrating the flaws in these assumptions, which are based on an idealised relationship between Higher Education and high skilled work, this book fills an important need by questioning the current rationale for further marketisation.
