Uniform Central Limit Theorems R. M. Dudley, 2014-02-24 In this new edition of a classic work on empirical processes the author an acknowledged expert gives a thorough treatment of the subject with the addition of several proved theorems not included in the first edition including the Bretagnolle Massart theorem giving constants in the Komlos Major Tusnady rate of convergence for the classical empirical process Massart s form of the Dvoretzky Kiefer Wolfowitz inequality with precise constant Talagrand s generic chaining approach to boundedness of Gaussian processes a characterization of uniform Glivenko Cantelli classes of functions Gin and Zinn s characterization of uniform Donsker classes and the Bousquet Koltchinskii Panchenko theorem that the convex hull of a uniform Donsker class is uniform Donsker The book will be an essential reference for mathematicians working in infinite dimensional central limit theorems mathematical statisticians and computer scientists working in computer learning theory Problems are included at the end of each chapter so the book can also be used as an advanced text

The Generic Chaining Michel Talagrand, 2005-03-17 The fundamental question of characterizing continuity and boundedness of Gaussian processes goes back to Kolmogorov After contributions by R Dudley and X Fernique it was solved by the author This book provides an overview of generic chaining a completely natural variation on the ideas of Kolmogorov It takes the reader from the first principles to the edge of current knowledge and to the open problems that remain in this domain

High Dimensional Probability VII Christian Houdré, David M. Mason, Patricia Reynaud-Bouret, Jan Rosiński, 2016-09-21 This volume collects selected papers from the 7th High Dimensional Probability meeting held at the Institut d tudes Scientifiques de Carg se IESC in Corsica France High Dimensional Probability HDP is an area of mathematics that includes the study of probability distributions and limit theorems in infinite dimensional spaces such as Hilbert spaces and Banach spaces The most remarkable feature of this area is that it has resulted in the creation of powerful new tools and perspectives whose range of application has led to interactions with other subfields of mathematics statistics and computer science These include random matrices nonparametric statistics empirical processes statistical learning theory concentration of measure phenomena strong and weak approximations functional estimation combinatorial optimization and random graphs The contributions in this volume show that HDP theory continues to thrive and develop new tools methods techniques and perspectives to analyze random phenomena
