Period: 1

The modern American supermarket has, on average 47,000 products.

The reality behind how our food is produced is not a farm, but a factory.

In the 1930's the drive in was invented by the McDonald brothers.

We have never had food companies this big, and this Powerful in our histories.

To build one poultry house costs between 280,000 and 400,000.

A typical grower (not farmer) with two chicken houses has borrowed over 500,000 and earned 13,000.

A Cornucopia:

Most of our industrial food base is made from Corn.

CAFO stands for Concentrated animal feeding operations.

Unintended Consequences: Regulatory agencies are being controlled by the companies they are supposed to be scrutinizing.

There are 13 slaughter houses in the USA that process the majority of the beef.

Kevin's Law would give the USDA the power to shut down processing plants that

repeatedly produce contaminated beef.

Beef filler is washed in Ammonia to kill e-coli bacteria.

The Dollar Menu:

The biggest determinant of obesity is income money.

One third of all Americans born after 2000 will contract early onset diabetes.

In The Grass:

The people who own the processing plants don't want others to go there because then the world would see the ugly truth.

Peace Operations and Organized Crime James Cockayne, Adam Lupel, 2011-05-10 Peace operations are increasingly on the front line in the international community's fight against organized crime this book explores how in some cases peace operations and organized crime are clear enemies while in others they may become tacit allies The threat posed by organized crime to international and human security has become a matter of considerable strategic concern for national and international decision makers so it is somewhat surprising how little thought has been devoted to addressing the complex relationship between organized crime and peace operations This volume addresses this gap questioning the emerging orthodoxy that portrays organized crime as an external threat to the liberal peace championed by western and allied states and delivered through peace operations Based upon a series of case studies it concludes that organized crime is both a potential enemy and a potential ally of peace operations and it argues for the need to distinguish between strategies to contain organized crime and strategies to transform the political economies in which it flourishes The editors argue for the development of intelligent transnational and transitional law enforcement that can make the most of organized crime as a potential ally for transforming political economies while at the same time containing the threat it presents as an enemy to building effective and responsible states The book will be of great interest to students of peacebuilding peace and conflict studies organised crime Security Studies and IR in general

Secret Undertaking Mark de Castrique,2018-09-04 The dark humor a small

community in a regional mystery and a strong supporting cast of believable characters will appeal to Margaret Maron's readers. Library Journal STARRED review Towns like Gainesboro, North Carolina, may be small but go big on local traditions. When funeral director and part-time deputy sheriff Barry Clayton and his childhood nemesis Archie Donovan Jr. unite to create a fundraising float in Gainesboro's annual Apple Festival Parade, what could go wrong? With Archie involved anything First the Grand Marshal, NC Secretary of Agriculture Graham James, is attacked by a gunman and Barry's Uncle Wayne is critically wounded in the melee. The assailant is killed. Then when the body of a convenience store owner is discovered less than an hour later with the gunman's food stamp card in his wallet, the case escalates. Two men dead. What is the connection? Barry and Sheriff Tommy Lee Wadkins swiftly learn their small town offers no protection against big-time crime. The body count rises as the scope of their homicide investigation crosses into the realm of the U.S. Marshals and their secretive Witness Protection Program. To penetrate its walls, Barry and Tommy Lee resort to a most unlikely ally: Archie. Is the insurance agent generally a victim of his own hare-brained schemes, capable of breaking the case, or will Archie find a way to become another of its casualties? The trio's secret undertaking into a convoluted conspiracy becomes a fight for survival in a world filled with betrayals where it's impossible to know which people to trust.

All Media Are Social Andrew M. Lindner, Stephen R. Barnard, 2020-04-07 From TV to smartphone apps to movies to newspapers, mass media are nearly omnipresent in contemporary life and act as a powerful social institution. In this introduction to media sociology, Lindner and Barnard encourage readers to think critically about the power of big media companies, state-media relations, new developments in journalism, representations of race, class, gender, and sexuality in media, and what social media may or may not be doing to our brains, among other topics. Each chapter explores pressing questions about media by carefully excavating the results of classic and contemporary social scientific studies. The authors bring these findings to life with anecdotes and examples ripped from headlines and social media newsfeeds. By synthesizing research on new media and traditional media, entertainment media, and news, quantitative and qualitative studies, *All Media Are Social* offers a succinct and accessibly written analysis of both enduring patterns and some of the newest developments in mass media. With strong emphases on theory and methods, Lindner and Barnard provide students and general readers alike with the tools to better understand the ever-changing media landscape.

Ecosystems as Models for Restoring our Economies, 2nd Edition John H. Giordanengo, 2025-04-01 Emerging from the fields of ecological restoration and economics, this interdisciplinary book delivers a clear path to restoring our economies in a way that speaks well to industry groups and business owners, students, and the general public, and to policy makers. There are proven relationships between ecology and economics; Giordanengo employs those relationships in an intriguing way and integrates them with global case studies to argue that redesigning economic systems according to ecological principles is necessary to balancing critical social, environmental, and economic

goals For example he reveals how more obscure ecological principles and theories succession evolution diversity productivity curves and so on can inform the restructuring of economic systems that are resilient productive and regenerative A variety of students and practitioners have read the first edition or attended John s seminars only to remark Why haven t we learned this in our traditional coursework or This book brings so much clarity to the fields of sustainability and environmental sciences Traditional approaches to sustainability focus on the social environmental and economic pillars of an economy while paying little attention to the foundation those pillars rest upon A comprehensive focus on our economy s foundational components has been ignored for good reason we have lacked an understanding of what they are or how they interact with one another Cross cutting research between ecological and economic systems reveals three foundational components i e drivers common to both systems The effective management of these components is perhaps the most important obstacle to resolving current tensions between society nature and the global market economy The scale at which diversity energy and trade must be managed is also justified by self regulating ecosystems such as jungles prairies and pine forests That scale is not global nor is it hyper local The economic and ecological rationale agree that the scale of a sustainable economy the natural geography of humans is regional To the contrary the attempt to manage our economy at a global scale has given rise to chronic social environmental and economic symptoms across earth In highly developed countries such as the United States these symptoms include flat real wages and productivity growth a growing wealth gap degraded environmental conditions rising social unrest and more The closing chapters outline a natural path for restoring our economies illuminated by humanities shared experience in ecological restoration The process of ecosystem recovery following disturbance i e succession is one such pathway Unwittingly developed nations such as the United States manage succession to concentrate wealth into fewer hands while lowering the economy s productive capacity net productivity and resistance to future disturbances Economic policies can also move the succession dial toward the productive and diverse center where wealth and resources are recirculated quickly new business opportunities are created and resilience and resistance are fortified a stout shield in the face of global economic turmoil For policymakers consumers and industry groups this book explores root causes of the challenges you face so that you may take deep correct actions to yield lasting change Giordanengo provides critique but goes further with clear steps that individuals businesses communities and policymakers can take to start restoring our economies now From agricultural restoration to regional manufacturing and energy systems he outlines practical strategies and policy mechanisms for building regenerative economies Students will find not just theoretical and systems knowledge but applied economics ecology and conservation centered around actionable pathways Economic restoration is not only possible it is our humanitarian duty
