Deep Neural Evolution Hitoshi Iba, Nasimul Noman, 2020-05-20 This book delivers the state of the art in deep learning DL methods hybridized with evolutionary computation EC Over the last decade DL has dramatically reformed many domains computer vision speech recognition healthcare and automatic game playing to mention only a few All DL models using different architectures and algorithms utilize multiple processing layers for extracting a hierarchy of abstractions of data Their remarkable successes notwithstanding these powerful models are facing many challenges and this book presents the collaborative efforts by researchers in EC to solve some of the problems in DL EC comprises optimization techniques that are useful when problems are complex or poorly understood or insufficient information about the problem domain is available This family of algorithms has proven effective in solving problems with challenging characteristics such as non convexity non linearity noise and irregularity which dampen the performance of most classic optimization schemes Furthermore EC has been extensively and successfully applied in artificial neural network ANN research from parameter estimation to structure optimization Consequently EC researchers are enthusiastic about applying their arsenal for the design and optimization of deep neural networks DNN This book brings together the recent progress in DL research where the focus is particularly on three sub domains that integrate EC with DL

- 1 EC for hyper parameter optimization in DNN
- 2 EC for DNN architecture design and
- 3 Deep neuroevolution

The book also presents interesting applications of DL with EC in real world problems e g malware classification and object detection Additionally it covers recent applications of EC in DL e g generative adversarial networks GAN training and adversarial attacks The book aims to prompt and facilitate the research in DL with EC both in theory and in practice
