Determination of Target Xenobiotics and Unknown Compound Residues in Food, Environmental, and Biological Samples Tomasz Tuzimski, Joseph Sherma, 2018-10-25 Xenobiotics are chemical compounds foreign to a given biological system In animals and humans xenobiotics include drugs drug metabolites and environmental pollutants In the environment xenobiotics include synthetic pesticides herbicides and industrial pollutants Many techniques are used in xenobiotics residue analysis the method selected depends on the complexity of the sample the nature of the matrix analytes and the analytical techniques available This reference will help the analyst develop effective and validated analytical strategies for the analysis of hundreds of different xenobiotics on hundreds of different sample types quickly accurately and at acceptable cost

Handbook of Isolation and Characterization of Impurities in Pharmaceuticals Satinder Ahuja, Karen Mills Alsante, 2003-06-26 The United States Food and Drug Administration FDA and other regulatory bodies around the world require that impurities in drug substance and drug product levels recommended by the International Conference on Harmonisation ICH be isolated and characterized Identifying process related impurities and degradation products also helps us to understand the production of impurities and assists in defining degradation mechanisms When this process is performed at an early stage there is ample time to address various aspects of drug development to prevent or control the production of impurities and degradation products well before the regulatory filing and thus assure production of a high quality drug product This book therefore has been designed to meet the need for a reference text on the complex process of isolation and characterization of process related synthesis and formulation impurities and degradation products to meet critical regulatory requirements It s objective is to provide guidance on isolating and characterizing impurities of pharmaceuticals such as drug candidates drug substances and drug products The book outlines impurity identification processes and will be a key resource document for impurity analysis isolation synthesis and characterization Provides valuable information on isolation and characterization of impurities Gives a regulatory perspective on the subject Describes various considerations involved in meeting regulatory requirements Discusses various sources of impurities and degradation products

Quality Control and Evaluation of Herbal

Drugs Pulok K. Mukherjee, 2019-05-30 Quality Control and Evaluation of Herbal Drugs brings together current thinking and practices for evaluation of natural products and traditional medicines. The use of herbal medicine in therapeutics is on the rise in both developed and developing countries and this book facilitates the necessary development of quality standards for these medicines. This book elucidates on various challenges and opportunities for quality evaluation of herbal drugs with several integrated approaches including metabolomics, chemoprofiling, marker analysis, stability testing, good practices for manufacturing, clinical aspects, Ethnopharmacology and Ethnomedicine inspired drug development. Written by Prof Pulok K Mukherjee, a leader in this field, the book highlights on various methods, techniques and approaches for evaluating the purity, quality, safety and efficacy of herbal drugs. Particular attention is paid to methods that assess these drugs' activity, the compounds responsible and their underlying mechanisms of action. The book describes the quality control parameters followed in India and other countries including Japan, China, Bangladesh and other Asian countries as well as the regulatory profiles of the European Union and North America. This book will be useful in bio-prospecting of natural products and traditional medicine inspired drug discovery and development. Provides new information on the research and development of natural remedies, essential reading on the study and use of natural resources for preventative or healing purposes. Brings together current thinking and practices in quality control and standardization of herbal drugs, highlighting several integrated approaches for metabolomics, chemo-profiling and marker analysis. Aids in developing knowledge of various techniques including macroscopy, microscopy, HPTLC, HPLC, LC-MS, MS-GC-MS etc with the development of integrated methods for evaluation of botanicals used in traditional medicine. Assessment of herbal drugs through bio-analytical techniques, bioassay, guided isolation, enzyme inhibition, pharmacological, microbiological, antiviral assays and safety related quality issues. References global organizations such as the WHO, USFDA, CDSCO, AYUSH, TCM and others to serve as a comprehensive document for enforcement agencies, NGOs and regulatory authorities.

LC-NMR Nina C. Gonnella, 2020-01-15 The isolation and structural characterization of substances present at very low concentrations as is necessary to satisfy regulatory requirements for pharmaceutical drug degradants and impurities can present scientific challenges. The coupling of HPLC with NMR spectroscopy has been at the forefront of cutting edge technologies to address these issues. LC-NMR: Expanding the Limits of Structure Elucidation presents a comprehensive overview of key concepts in HPLC and NMR that are required to achieve definitive structure elucidation with very low levels of analytes. Because skill sets from both of these highly established disciplines are involved in LC-NMR, the author provides introductory background to facilitate readers' proficiency in both areas, including an entire chapter on NMR theory. The much anticipated second edition provides guidance in setting up LC-NMR systems, discussion of LC methods that are compatible with NMR and an update on recent hardware and software advances for system performance such as improvements in magnet design, probe technology and solvent suppression techniques that enable unprecedented mass sensitivity in NMR. This edition features methods to quantify

concentration and assess purity of isolated metabolites on the micro scale and incorporates computational approaches to accelerate the structure elucidation process The author also includes implementation and application of qNMR and automated and practical use of computational chemistry combined with QM and DFT to predict highly accurate NMR chemical shifts The text focuses on current developments in chromatographic NMR integration with particular emphasis on utility in the pharmaceutical industry Applications include trace analysis analysis of mixtures and structural characterization of degradation products impurities metabolites peptides and more The text discusses novel uses and emerging technologies that challenge detection limits as well future directions for this important technique This book is a practical primary resource for NMR structure determination including theory and application that guides the reader through the steps required for isolation and NMR structure elucidation on the micro scale Gas and Liquid Chromatography in Analytical Chemistry
