Mouthpiece Ventilation (MPV)

MPV is a new feature in AC and PC modes for patients who are not invasively ventilated. The therapy, triggering, alarms, and user interface will provide on-demand ventilation without the need for an exhalation device. In addition, the Philips Respirationics MPV Disposable Circuit further simplifies the user experience and ensures proper operation.

A new feature within MPV is the Circuit Disconnect (MPV) alarm. This alarm will notify the patient or caregiver that a spontaneous breath has not been initiated within the selected period. This may be useful to alert a caregiver when a patient is unable to connect to the mouthpiece or if the patient has fallen asleep.

Setting up the MPV feature

Breathing Circuit Types

The available Philips Respirationics MPV Disposable Circuit (or an equivalent circuit) is required for the proper operation of MPV. This circuit is supplied without an exhalation device and is not intended to support exhaling into the circuit.

For those patients who prefer to exhale into the breathing circuit, the passive and active circuits currently offered with the Trilogy ventilator may be used with MPV. Refer to chapter 4 of the manual (see section titled "Connect the Breathing Circuit to the Ventilator").

Connect the MPV Breathing Circuit to the Ventilator

When using the available Philips Respirationics MPV Disposable Circuit, always follow the instructions included with the circuit.

Set up the Ventilator to Use MPV

1. Go to the Set-up screen when therapy is OFF. MPV cannot be enabled when the therapy is being delivered.
2. Select the Circuit Type: If you have a prescription that uses an active circuit, set the Circuit Type to match the prescription you normally use. Otherwise, set the Circuit Type to Passive.
3. Set the Mode to AC or PC. MPV is only available in these two modes.
4. Set MPV to ON.

Encyclopedia of the Novel Paul Schellinger, 2014-04-08. The *Encyclopedia of the Novel* is the first reference book that focuses on the development of the novel throughout the world. Entries on individual writers assess the place of that writer within the development of the novel form, explaining why and in exactly what ways that writer is important. Similarly, an entry on an individual novel discusses the importance of that novel, not only from analyzing the particular innovations that novel has introduced and the ways in which it has influenced the subsequent course of the genre. A wide range of topic entries explore the history, criticism, theory, production, dissemination, and reception of the novel. A very important component of the *Encyclopedia of the Novel* is its long

Rapid ABG Interpretation Desmond Allen, 2014-11-26 Desmond Allen has been a credentialed respiratory therapist since 1975. He has managed or been the clinical coordinator of four cardiopulmonary departments and the clinical preceptor for numerous students. He holds a PhD in education and another in health administration. The rapid interpretation of ABGs need not be the ominous task that it is for so many. Herein, clinicians will learn to interpret ABGs rapidly by answering three simple questions: Is the pH normal, acidotic, or alkalotic? Is the pH correctly predicted by the PaCO₂? If the pH is abnormal, is the abnormality caused, compensated, or exacerbated by the PaCO₂? By answering these simple questions, we have all the information we need for an accurate interpretation, whether the ABG is normal, respiratory or metabolic acidosis or alkalosis, or both acute, compensated, or partially compensated. The second section covers the fundamentals of BiPAP and mechanical ventilation management. These guidelines are presented so as to be employed in real time by physicians and respiratory therapists or to be converted into policies and procedures.
