Zoomorphic New Animal Architecture:

Zoomorphic ,2003 **Zoomorphic: New Animal Architecture** Hugh Aldersey-Williams,2003-10-07 A quirky trend of building designs inspired by bizarre animals has emerged in the last few years Why and how has this happened Is it because of new technical possibilities in materials and structural engineering Or is the answer to be found in new social preoccupations in science After a brief look at the historical precedents the book focuses on contemporary examples from around the world and shows the various ways in which the organic animal forms inform the architectural ones Featured architects include Frank Gehry Michael Sorkin and Greg Lynn **Zoomorphic** ,2003 *From Elephants to Skyscrapers: Zoomorphic Architecture* Neill Lundgren,2018-04-05 Imagine a structure that looks like a huge elephant where you walk up a spiral staircase hidden in a leg into interior rooms past sun filled windows where you can view the sunset on the expansive horizon What about a big pink pig that once served as a hamburger stand How about visiting a hotel that is designed like a crocodile or a museum that resembles a turtle These oddities of architecture are classified as zoomorphic architecture Zoomorphic architects study the shapes of animals or **New Sacred Architecture** Phyllis Richardson,2004 This timely book reflects an awakening of interest in religious faiths and the emergence of a global exchange of architecture and culture While Spain s Rafael Moneo has recently completed a cathedral in Los Angeles Britain s Thomas Heatherwick is designing a Buddhist temple in Japan John Pawson is working on a Cistercian monastery in the Czech Republic and Richard Meier has completed his Jubilee Church in Rome It seems as one Wallpaper registered pundit commented religion is getting a redesign and the architect s faith is as unimportant as his or her nationality I Looking at ways in which contemporary architects are approaching religious or meditative space this book focuses on churches chapels temples synagogues and mosques that have been built in the last few years and that represent a late twentieth early twenty first century aesthetic , **Structures and Architecture** Paulo J. Cruz,2013-06-27 Although the disciplines of architecture and structural engineering have both experienced their own historical development their interaction has resulted in many fascinating and delightful structures To take this interaction to a higher level there is a need to stimulate the inventive and creative design of architectural structures and to persuade *Architecture, Ethics, and the Personhood of Place* Gregory Caicco,2007 Architecture and environmental design are among the last professional fields to develop a sustained and nuanced discussion concerning ethics Hemmed in by politics and powerful clients on one side and the often unscrupulous practices of the construction industry on the other environmental designers have been traditionally reluctant to address ethical issues head on And yet the rapid urbanization of the world s population continues to swell into new megacities each less healthy welcoming secure or environmentally sustainable than the next Green carbon reduced and sustainable building practices are important ways architects have recently responded to the symptoms of the crisis but are these efforts really addressing the core issues Taking the Dine Navajo Hogan Song a song used to protect and nourish the personhood of newly constructed dwellings as their inspiration

the architects philosophers poets and other contemporary scholars contributing to this volume demonstrate that a deeper more radical change in our relationship to the built world needs to occur While offering a careful critique of modernist corporate or techno enthralled design practices these essays investigate an alternative relational ecology whose wisdom draws from ancient and often marginalized voices if not the whisperings of the earth itself Contributors include Richard Kearney Alberto Perez Gomez Juhani Pallasmaa Karsten Harries Edward Casey Susan Stewart David Abram Stacy Alaimo Jace and Laura Weaver Philip Sheldrake and Sebnem Yucel Young

Exercises and Solutions in Statistical Theory Lawrence L. Kupper, Brian. H Neelon, Sean M. O'Brien, 2013-06-24 Exercises and Solutions in Statistical Theory helps students and scientists obtain an in depth understanding of statistical theory by working on and reviewing solutions to interesting and challenging exercises of practical importance Unlike similar books this text incorporates many exercises that apply to real world settings and provides much more thorough solutions The exercises and selected detailed solutions cover from basic probability theory through to the theory of statistical inference Many of the exercises deal with important real life scenarios in areas such as medicine epidemiology actuarial science social science engineering physics chemistry biology environmental health and sports Several exercises illustrate the utility of study design strategies sampling from finite populations maximum likelihood asymptotic theory latent class analysis conditional inference regression analysis generalized linear models Bayesian analysis and other statistical topics The book also contains references to published books and articles that offer more information about the statistical concepts Designed as a supplement for advanced undergraduate and graduate courses this text is a valuable source of classroom examples homework problems and examination questions It is also useful for scientists interested in enhancing or refreshing their theoretical statistical skills The book improves readers comprehension of the principles of statistical theory and helps them see how the principles can be used in practice By mastering the theoretical statistical strategies necessary to solve the exercises readers will be prepared to successfully study even higher level statistical theory

Regenerative Urban Design and Ecosystem Biomimicry Maibritt Pedersen Zari, 2018-05-20 It is clear that the climate is changing and ecosystems are becoming severely degraded Humans must mitigate the causes of and adapt to climate change and the loss of biodiversity as the impacts of these changes become more apparent and demand urgent responses These pressures combined with rapid global urbanisation and population growth mean that new ways of designing retrofitting and living in cities are critically needed Incorporating an understanding of how the living world works and what ecosystems do into architectural and urban design is a step towards the creation and evolution of cities that are radically more sustainable and potentially regenerative Can cities produce their own food energy and water Can they be designed to regulate climate provide habitat cycle nutrients and purify water air and soil This book examines and defines the field of biomimicry for sustainable built environment design and goes on to translate ecological knowledge into practical methodologies for architectural and urban design that can proactively respond to climate change and biodiversity loss These methods are tested and exemplified through a series of case studies of existing cities in a variety of climates *Regenerative Urban Design and Ecosystem Biomimicry* will be of great interest to students professionals and researchers of architecture urban design ecology and environmental studies as well as those interested in the interdisciplinary study of sustainability ecology and urbanism

Handbook of Research on Visual Computing and Emerging Geometrical Design Tools Amoruso, Giuseppe, 2016-04-11 Visual computing and descriptive geometry are multidisciplinary fields addressing the handling of images 3D models and other computer graphics These ideas are experiencing a revival due to emergent technologies and applications available to developers Based in traditional forms of design and architecture these fields are currently experiencing a bounty of new research based on old principles The Handbook of Research on Visual Computing and Emerging Geometrical Design Tools seeks to add to this knowledge base by considering these technologies from a designer's perspective rather than reiterating the principles of computer science It combines aspects of geometry and representation with emerging tools for CAD generation and visualization while addressing the digital heritage of such fields This book is an invaluable resource for developers students of both graphic and computer generated design researchers and designers

Architect Knows Best Simon Richards, 2016-04-15 The idea that buildings could be used to reform human behaviour and improve society was fundamental to the modernist architecture and planning of people like Walter Gropius Le Corbusier and Jos Luis Sert in the first half of the 20th century Their proposals for functional zoning multi level transport high rise living and machine inspired aesthetics came under attack from the 1950s onwards and many alternative approaches to architecture and planning emerged It was thought that the environmental determinist strand of the discourse was killed off at this time as well This book argues that it was not but on the contrary that it has deepened and diversified Many of the most prominent architect planners continue to design with a view to improving the behaviour of individual people and of society at large By looking at and interviewing major figures and movements of recent years in Britain Europe and America including L on Krier Peter Eisenman Andr s Duany Jane Jacobs Robert Venturi and Denise Scott Brown it demonstrates the myriad ways that architect planners seek to shape human behaviour through buildings In doing so the book raises awareness of this strand within the discourse and examines its different purposes and manifestations It questions whether it is an ineradicable and beneficial part of architecture and planning or a regrettable throwback to a more authoritarian phase

discusses why is it seldom acknowledged directly and whether it could be handled more responsibly and with greater understanding Richards does not provide any simple solutions but in conclusion is critical of architect planners who abuse the rhetoric of social reform simply to leverage their attempts to secure building commissions while being more sympathetic towards those who appear to have a sincere desire to improve society through their buildings

The Designer's Atlas of Sustainability Ann Thorpe, 2007-06-20 Designing for sustainability is an innovation shaping both the design industry and design education today Yet architects product designers and other key professionals in this new field have so far lacked a resource that addresses their sensibilities and concerns The Designer's Atlas of Sustainability now explores the basic principles concepts and practice of sustainable design in a visually sophisticated and engaging style The book tackles not only the ecological aspects of sustainable design designers choice of materials and manufacturing processes have a tremendous impact on the natural world but also the economic and cultural elements involved The Atlas is neither a how to manual nor collection of recipes for sustainable design but a compendium of fresh approaches to sustainability that designers can incorporate into daily thinking and practice Illuminating many facets of this exciting field the book offers ideas on how to harmonize human and natural systems and then explores practical options for making the business of design more supportive of long term sustainability An examination of the ethical dimensions of sustainable development in our public and private lives is the theme present throughout Like other kinds of atlases The Designer's Atlas of Sustainability illustrates its subject but it goes far beyond its visual appeal stimulating design solutions for development that cultivates environmental and social conditions that will support human well being indefinitely
