Thermoforming of Single and Multilayer Laminates Syed Ali Ashter, 2013-11-07 Thermoforming of Single and Multilayer

Laminates explains the fundamentals of lamination and plastics thermoforming technologies along with current and new developments. It focuses on properties and thermoforming mechanics of plastic films and in particular single and multilayered laminates including barrier films. For environmental and economic reasons laminates are becoming increasingly important as a replacement for solid sheets and paint finishes in many industries including transportation, packaging and construction. Yet the processes of film formability during the extensive deformation and elevated temperatures experienced in conventional processing technologies such as thermoforming are poorly understood by most engineers. This book covers production processes such as extrusion, calendaring and casting as well as mechanical and impact testing methods. It also describes how testing protocols developed for metals can be leveraged for plastic films and laminates and includes a thorough discussion on methods for performing optical strain analysis. Applications in transportation vehicles and packaging including packaging for food, medical and electronics applications, sports equipment and household appliances are discussed. Safety, recycling and environmental aspects of thermoforming and its products complete the book. First comprehensive source of information and hands on guide for the thermoforming of multilayered laminates. Covers applications across such sectors as automotive, packaging, home goods and construction. Introduces new testing methods leveraging protocols used for metals.
