Think Stats Allen B. Downey, 2011-07-01 If you know how to program you have the skills to turn data into knowledge using the tools of probability and statistics This concise introduction shows you how to perform statistical analysis computationally rather than mathematically with programs written in Python You ll work with a case study throughout the book to help you learn the entire data analysis process from collecting data and generating statistics to identifying patterns and testing hypotheses Along the way you ll become familiar with distributions the rules of probability visualization and many other tools and concepts Develop your understanding of probability and statistics by writing and testing code Run experiments to test statistical behavior such as generating samples from several distributions Use simulations to understand concepts that are hard to grasp mathematically Learn topics not usually covered in an introductory course such as Bayesian estimation Import data from almost any source using Python rather than be limited to data that has been cleaned and formatted for statistics tools Use statistical inference to answer questions about real world data Think Stats Allen B. Downey, 2014-10-16 If you know how to program you have the skills to turn data into knowledge using tools of probability and statistics This concise introduction shows you how to perform statistical analysis computationally rather than mathematically with programs written in Python By working with a single case study throughout this thoroughly revised book you ll learn the entire process of exploratory data analysis from collecting data and generating statistics to identifying patterns and testing hypotheses You ll explore distributions rules of probability visualization and many other tools and concepts New chapters on regression time series analysis survival analysis and analytic methods will enrich your discoveries Develop an understanding of probability and statistics by writing and testing code Run experiments to test statistical behavior such as generating samples from several distributions Use simulations to understand concepts that are hard to grasp mathematically Import data from most sources with Python rather than rely on data that s cleaned and formatted for statistics tools Use statistical inference to answer questions about real world data Think Stats Allen B. Downey, 2025-04-04 If you know how to program you have the skills to turn data into knowledge This thoroughly revised edition presents statistical concepts computationally rather than mathematically using programs written in Python Through practical examples and exercises based on real world datasets you ll learn the entire process of exploratory data analysis from wrangling data and generating statistics to identifying patterns and testing hypotheses Whether you re a data scientist software engineer or data enthusiast you ll get up to speed on commonly used tools including NumPy SciPy and Pandas You ll explore distributions relationships between variables visualization and many other concepts And all chapters are available as Jupyter notebooks so you can read the text run the code and work on exercises all in one place Analyze data distributions and visualize patterns using Python libraries Improve predictions and insights with regression models Dive into specialized topics like time series analysis and survival analysis Integrate statistical techniques and tools for validation inference and more Communicate findings with effective data

Downey, 2014 **Think Bayes** Allen B. Downey, 2021-05-18 If you know how to program you re ready to tackle Bayesian statistics With this book you ll learn how to solve statistical problems with Python code instead of mathematical formulas using discrete probability distributions rather than continuous mathematics Once you get the math out of the way the Bayesian fundamentals will become clearer and you ll begin to apply these techniques to real world problems Bayesian statistical methods are becoming more common and more important but there aren t many resources available to help beginners Based on undergraduate classes taught by author Allen B Downey this book s computational approach helps you get a solid start Use your programming skills to learn and understand Bayesian statistics Work with problems involving estimation prediction decision analysis evidence and Bayesian hypothesis testing Get started with simple examples using coins dice and a bowl of cookies Learn computational methods for solving real world problems [Metadata Standards and Web Services in Libraries, Archives, and Museums](#) Erik Mitchell, 2015-10-21 Metadata in library information environments is evolving rapidly This book provides readers with a set of tools for designing developing and implementing metadata rich information systems while also examining the challenges and opportunities in this field As the world of library and information science has developed in the age of digital information metadata and metadata rich information systems have become increasingly important and more complex and confusing This book will enable students instructors and practitioners in the information science field to understand how these new systems and standards will impact their careers and professions Author Erik Mitchell explores definitions of information and presents an up to date consideration of user needs in information systems to provide necessary background before moving on to in depth discussions of metadata information organization practice and information system design Each chapter incorporates hands

on activities to complement the reading material allowing readers to build technical skills alongside the important conceptual learning in this content area Readers will gain conceptual understanding and skills that will allow them to analyze and transform structured data develop metadata rich information systems and design systems with user needs and digital literacies in mind This book is intended for library and information science students taking information organization metadata or other core digital cataloging classes but will also be highly useful for professionals seeking to learn the details of metadata systems and theory using a hands on approach

Probably Overthinking It Allen B. Downey, 2023-12-06 Teacher data scientist and blogger Allen B Downey knows well that the human mind has both an innate ability to understand statistics and to be fooled by them Statistically speaking you will be less popular than your friends arrive at a train station during a gap in service and fail to find a running mate in a race But more than surprising us errors in statistical thinking Downey shows can have a huge impact Statistical confusion has led to incorrect patient prognoses caused mistakes in predicting disasters like earthquakes hurt vaccination programs hindered social justice efforts and led to dubious policy decisions Written for those who may have once taken a statistics course but now forget almost everything they've learned the book includes a diversity of examples that use real data and have real world impacts Building understanding incrementally Downey engagingly and accessibly helps readers understand what we might learn when we get the mathematics right and the consequences when we get it all wrong

Bayesian Modeling and Computation in Python Osvaldo A. Martin, Ravin Kumar, Junpeng Lao, 2021-12-28 Bayesian Modeling and Computation in Python aims to help beginner Bayesian practitioners to become intermediate modelers It uses a hands on approach with PyMC3 Tensorflow Probability ArviZ and other libraries focusing on the practice of applied statistics with references to the underlying mathematical theory The book starts with a refresher of the Bayesian Inference concepts The second chapter introduces modern methods for Exploratory Analysis of Bayesian Models With an understanding of these two fundamentals the subsequent chapters talk through various models including linear regressions splines time series Bayesian additive regression trees The final chapters include Approximate Bayesian Computation end to end case studies showing how to apply Bayesian modelling in different settings and a chapter about the internals of probabilistic programming languages Finally the last chapter serves as a reference for the rest of the book by getting closer into mathematical aspects or by extending the discussion of certain topics This book is written by contributors of PyMC3 ArviZ Bambi and Tensorflow Probability among other libraries
