Three Roses Muscular Dystrophy Exceptional

Richard Bailey

Three Roses Muscular Dystrophy Exceptional:

Three Roses Michael S. Hudecki, 2015-12-11 *Three Roses Living with Muscular Dystrophy and Marrying the Ideal Woman* introduces a man who knew from his early childhood that he would face life with the ever present reality of muscular dystrophy. Despite the challenges this condition presented him, Michael S. Hudecki achieved both professional success and personal contentment. His memoir relates the circumstances of his childhood, follows him through his academic years, and relates how, while pursuing his PhD in biology at the University of Buffalo, he came to know and to love the woman of his dreams. Rajmohini Sebastian, a Fulbright scholar from India, despite three years of living apart following their graduation, they reunited at John F. Kennedy International Airport. Meeting her after she cleared customs checks, he presented her with a dozen red roses and three yellow roses, one for each year they spent apart. They married soon after that. *Three Roses* opens a window into the life of someone who faces life with courage and faith, who makes a valued and lasting contribution to the world's body of knowledge concerning muscular dystrophy, and recognizes and follows the beckoning of his heart.

Molecular Genetics of Cardiac Electrophysiology C. Berul, Jeffrey A. Towbin, 2000-04-30 The molecular basis for atrial fibrillation continues to be largely unknown, and therapy remains unchanged, aimed at controlling the heart rate and preventing systemic emboli with anticoagulation. Familial atrial fibrillation is more common than previously suspected. While atrial fibrillation is commonly associated with acquired heart disease, a significant proportion of individuals have early onset without other forms of heart disease, referred to as lone atrial fibrillators. It is also well recognized that atrial fibrillation occurs on a reversible or functional basis without associated structural heart disease, such as with hyperthyroidism or of atrial fibrillation following surgery. It remains to be determined what percentage in these individuals is familial or due to a genetic predisposition. Mapping the locus for familial atrial fibrillation is the first step towards the identification of the gene. Isolation of the gene and subsequent identification of the responsible molecular genetic defect should provide a point of entry into the mechanism responsible for the familial form and the common acquired forms of the disease and eventually provide more effective therapy. We know that the ionic currents responsible for the action potential of the atrium are due to multiple channel proteins, as is electrical conduction throughout the atria. Analogous to the ongoing genetic studies in patients with familial long QT syndrome, it is highly likely that defects in each of these channel proteins will be manifested in familial atrial fibrillation. *American Journal of Physiology*, 1909 Vols for 1898-1941, 1948-56 include the Society's proceedings, primarily abstracts of papers presented at the 10th, 53rd annual meetings and the 1948-56 fall meetings. **Outstanding Young Men**
