Personnel and Policy Analysts Managers and Decision Makers NGOs and GOs **Innovative Urban Wet-Weather Flow Management Systems** Richard Field, James P. Heaney, Robert Pitt, 2000-06-27 The 20th century's automobile inspired land use changes brought about tremendous transformations in how stormwater moves across the modern urban landscape. Streets and parking areas in the average urban family's neighborhood now exceed the amount of land devoted to living space. Add parking office and commercial space and it's easy to understand how modern cities have experienced a three fold increase in impervious areas. Traditional wet weather collection systems removed stormwater from urban areas as quickly as possible often transferring problems downstream. Innovative Urban Wet Weather Flow Management Systems does two things. It considers the physical chemical and biological characteristics of urban runoff then describes innovative methods for improving wet weather flow WWF management systems. The result of extensive research Innovative Urban Wet Weather Flow Management Systems looks most at how to handle runoff in developments of the 21st century the conflicting objectives of providing drainage while decreasing stormwater pollutant discharges the impact of urban WWF on surface and groundwater such as smaller urban stream channels scoured by high peak flows sediment transport and the toxic effects of WWF on aquatic organisms the effectiveness of WWF controls including design guidelines and source and downstream controls are an important issue. Innovative Urban Wet Weather Flow Management Systems looks at how source controls like biofiltration created through simple grading may work in newly developing areas while critical source areas like an auto service facilities may need more extensive treatment strategies. Focusing WWF treatment on intensively used areas such as the 20 percent of streets that handle the bulk of the traffic and under utilized parking areas is also considered. Developing a more integrated water supply system collecting treating and disposing of wastewater and handling urban WWF requires innovative methods such as a neighborhood scale system that would recycle treated wastewater and storm water for lawn watering and toilet flushing or use treated roof runoff for potable purposes.
