E. Gillian, 1982 *Advances in User Authentication* Dipankar Dasgupta, Arunava Roy, Abhijit Nag, 2017-08-22 This book is
dedicated to advances in the field of user authentication The book covers detailed description of the authentication process
as well as types of authentication modalities along with their several features authentication factors It discusses the use of
these modalities in a time varying operating environment including factors such as devices media and surrounding conditions
like light noise etc The book is divided into several parts that cover descriptions of several biometric and non biometric
authentication modalities single factor and multi factor authentication systems mainly adaptive negative authentication
system etc Adaptive strategy ensures the incorporation of the existing environmental conditions on the selection of
authentication factors and provides significant diversity in the selection process The contents of this book will prove useful to
practitioners researchers and students The book is suited to be used a text in advanced graduate courses on User

Parhi, B. B. Biswal, 2021-02-17 This book comprises select papers presented at the Conference on Innovative Product Design
and Intelligent Manufacturing System IPDIMS 2020 The book discusses the latest methods and advanced tools from different
areas of design and manufacturing technology The main topics covered include design methodologies industry 4.0 smart
manufacturing and advances in robotics among others The contents of this book are useful for academics as well as
professionals working in the areas of industrial design mechatronics robotics and automation Small-Scale Energy
Systems with Gas Turbines and Heat Pumps Satoru Okamoto, 2021-03-29 A heat pump system can produce an amount of heat
energy that is greater than the amount of energy used to run the heat pump system Thus a heat pump system is considered
to be a machine system that can use energies efficiently as is the load leveling air conditioning system utilizing unutilized
energies at high levels Adaptations of gas turbines for industrial utility and marine propulsion applications have long been
accepted as means for generating power with high efficiency and ease of maintenance Cogeneration with gas turbine is
frequently defined as the sequential production of useful thermal energy and shaft power from a single energy source For
applications that generate electricity the power can either be used internally or supplied to the utility grid This Special Issue
intends to provide an overview of the existing knowledge related with various aspects of Small Scale Energy Systems with
Gas Turbines and Heat Pumps and contributions on but not limited to the following subjects were encouraged wake of stator

vane to improve sealing effectiveness gas turbine cycle with external combustion chamber for prosumer and distributed energy systems computational simulation of gas turbine engine operating with different blends of biodiesel experimental methodology and facility for the engine performance and emissions evaluation using jet and biodiesel blends experimental analysis of an air heat pump for heating service hybrid fuel cell Brayton cycle for combined heat and power design analysis of micro gas turbines in closed cycles Seven papers were published in the Special Issue out of a total of 12 submitted

Handbook of Research on Artificial Intelligence Applications in the Aviation and Aerospace Industries Shmelova, Tetiana, Sikirda, Yuliya, Sterenharz, Arnold, 2019-10-11 With the emergence of smart technology and automated systems in today's world artificial intelligence AI is being incorporated into an array of professions The aviation and aerospace industry specifically is a field that has seen the successful implementation of early stages of automation in daily flight operations through flight management systems and autopilot However the effectiveness of aviation systems and the provision of flight safety still depend primarily upon the reliability of aviation specialists and human decision making The Handbook of Research on Artificial Intelligence Applications in the Aviation and Aerospace Industries is a pivotal reference source that explores best practices for AI implementation in aviation to enhance security and the ability to learn improve and predict While highlighting topics such as computer aided design automated systems and human factors this publication explores the enhancement of global aviation security as well as the methods of modern information systems in the aeronautics industry This book is ideally designed for pilots scientists engineers aviation operators air crash investigators teachers academicians researchers and students seeking current research on the application of AI in the field of aviation
