Utilisation And Conservation Of Farm Animal Genetic Resources:

Utilisation and conservation of farm animal genetic resources Kor Oldenbroek, 2023-08-28 The genetic diversity comprised in farm animal species and breeds is an important resource in livestock systems For several reasons within the different species used for food production only a few breeds are developed towards high output breeds fitting in high input systems In this process many breeds are set aside from the food producing livestock systems These breeds will be faced with extinction unless new functions for these breeds are found This is a real threat for the genetic diversity within species This book is intended to give insight into the issues of the utilisation and conservation of farm animal genetic resources towards a broad group of readers interested in these subjects The insight is presented as applications of population molecular and quantitative genetics that can be used to take appropriate decisions in utilisation and conservation programmes A previous edition of this book is a key resource in courses worldwide and cited in many scientific publications The first two chapters discuss the decisions to be made in utilisation and conservation Chapter 3 surveys the different ways in which the diversity we observe within a species can be characterised Chapter 4 illustrates recent results using this theory for utilisation and conservation purposes Chapters 5 6 and 7 give theoretical backgrounds necessary to make decisions and chapters 8 and 9 present the operation and practical implications of selection and conservation schemes

National Plan for Conservation and Sustainable Use of Farm Animal Genetic Resources, 2016 **Farm Animal Genetic Resources: Technical Considerations for Policy-Makers Concerning Conservation and Use**, **Options and Strategies for the**

Conservation of Farm Animal Genetic Resources J. Gibson, 2006 Sixty three experts from 28 countries and eight international organizations met for four days in Montpellier France in November 2005 to review the options and strategies for the conservation of farm animal genetic resources FAnGR and to identify priorities for action The workshop focused primarily on the technical needs and opportunities and placed less emphasis on policy and institutional issues although findings on such issues did arise naturally from many of the conclusions drawn The workshop resulted in 11 major findings and 13 priorities for action The workshop also identified four broad areas where information and knowledge were lacking The findings and priorities for action are listed here in the executive summary and each is explained in more detail in the body of this report They are presented in the order developed by the workshop Participants did not attempt to rank the findings and actions

Innovations in cryoconservation of animal genetic resources Food and Agriculture Organization of the United Nations, Boes, J, Boettcher, P, Honkatukia, M, 2023-01-17 The livestock sector faces a range of challenges including climate change emerging diseases competition for natural resources and evolving demand for animal source foods which is increasing globally especially in developing countries Genetic diversity of livestock is a key resource for allowing livestock keepers to address these challenges but this diversity has been in a state of decline The diminishing genetic diversity thus represents yet another obstacle for sustainable livestock production Cryoconservation i e ex situ in vitro conservation of

genetic resources through gene banking provides one of the most powerful tools governments and other stakeholders have to manage genetic diversity in both the short and long term and thereby provide future generations with the tools to meet the challenges ahead Gene banking genetic resources fits within the context of the Global Plan of Action for Animal Genetic Resources which was developed and adopted by FAO Member Nations Specifically Strategic Priority 9 of the Global Plan of Action is Establish or strengthen ex situ conservation programmes and Strategic Priority 11 urges countries to Develop approaches and technical standards for conservation To assist countries in the implementation the Global Plan of Action FAO worked with experts from around the world to prepare technical guidelines In 2012 FAO published FAO Guidelines on Cryoconservation of animal genetic resources Gene banking is a long term effort that needs to be viewed in terms of decades rather than years as demonstrated by similar systems for agricultural crops The responsibility for establishing such resources lies squarely within governments roles of providing public goods and food security Gene banking of animal genetic resources is a technology intense undertaking and the associated technologies are in a continual state of research and development The livestock sector also continues to evolve rapidly Since the development and release of the previous guidelines numerous changes have taken place Critical among these is a greater appreciation of the opportunities for actively utilizing cryopreserved material to enhance management of in vivo populations rather than as simply an insurance policy to protect breeds against extinction This key development has led to further changes in gene bank management First interaction with users of the stored material has increased This in turn has created a need to involve stakeholders more closely in the management of genetic collections and to better monitor and document the processes of gene banking to ensure quality management *Management and Exchange of Animal Genetic Resources* ,2008 **User's Manual for National Coordinators for the Management of Farm Animal Genetic Resources** ,1998 The Domestic Animal Diversity Information System DAD IS provides information and tools for management teaching and research related to the characterization sustainable use and conservation of farm animal genetic resources **Genomic management of animal genetic diversity** J.K. Oldenbroek,2023-08-07 Recently developed genomic tools like SNP genotyping and whole genome sequencing and their analysis offer great opportunities for the conservation and utilisation of animal genetic diversity both among and within breeds These genomic tools can be used to detect potentially valuable rare alleles and haplotypes They are important parts of the genetic diversity we need to conserve now for possible utilisation in the future This book describes the use of genomic technology to define breeds to measure diversity and to assess important features in the history of breeds affecting the present genetic diversity The management of genetic diversity with genomic tools is outlined both in vivo small populations of rare breeds or large populations with small effective population sizes and in vitro genebanks Special attention is given to the genomic management of populations of animals with high incidences of genetic defects This book is intended for MSc and PhD students scientists working with small populations in animal breeding and in conservation programmes for

rare breeds The State of the World's Animal Genetic Resources for Food and Agriculture Barbara Rischkowsky, Dafydd Pilling, 2007-01-01 Sustainable management of the world's livestock genetic diversity is of vital importance to agriculture food production rural development and the environment This publication is the first global assessment of these resources Drawing on 169 Country Reports contributions from a number of international organizations and 12 specially commissioned thematic studies it presents an analysis of the state of agricultural biodiversity in the livestock sector origins and development uses and values distribution and exchange risk status and threats and of capacity to manage these resources institutions policies and legal frameworks structured breeding activities and conservation programs Needs and challenges are assessed in the context of the forces driving change in livestock production systems Tools and methods to enhance the use and development of animal genetic resources are explored in sections on the state of the art in characterization genetic improvement economic evaluation and conservation As well providing a technical reference document the country based preparation of The State of the World has led to a process of policy development and a Global Plan of Action for Animal Genetic Resources which once adopted will provide an agenda for action by the international community Publisher's description Conservation and Sustainable Use of Animal Genetic Resources for Food and Agriculture Centrum voor Genetische Bronnen Nederland (Wageningen), 2014 *Learning Agrobiodiversity*, 2009 *Cryoconservation of Animal Genetic Resources* Food and Agriculture Organization of the United Nations, 2012 This publication presents current state of the art knowledge on the use of co products from the biofuel industry as livestock feed At present biofuel production makes use of agricultural crops grown primarily on arable land in particular maize and wheat and sugar cane used for the production of ethanol **The Legal Framework for the Management of Animal Genetic Resources** Food and Agriculture Organization of the United Nations, 2005-01-01 Based on information gathered mainly through national surveys the study provides an overview of the main legal instruments governing the management of animal genetic resources at the national level Relevant international and regional regulatory frameworks are also examined As the policy debate on the management of animal genetic resources evolves in various fora and as FAO develops the Global Strategy for the Management of Farm Animal Genetic Resources the discussion on legal issues will take centre stage The study aims to contribute to such discussion through a general assessment of the status of national regulatory frameworks and general recommendations for national legislation development *The State of the World's Animal Genetic Resources for Food and Agriculture-- in Brief* Barbara Rischkowsky, 2007-01-01 This in brief version intended for use by decision makers and the wider public presents a summary of the key findings of the main report see above Part 1 outlines the state of agricultural biodiversity in the livestock sector Part 2 considers the livestock production systems of which animal genetic resources form a part Part 3 largely based on the 148 Country reports is an assessment of institutional and human capacity in the field of animal genetic resources management Part 4 presents the state of the art in terms of the methods available for the

management of animal genetic resources As well as providing a technical reference document the country based preparation of The State of the World has led to a process of policy development and a Global Plan of Action for Animal Genetic Resources which once adopted will provide an agenda for action by the international community *In Vivo Conservation of Animal Genetic Resources* Food and Agriculture Organization of the United Nations,2013 These guidelines present the basic concepts involved in the development and implementation of in vivo conservation plans for animal genetic resources for food and agriculture The guidelines are intended for use by policy makers in the management of animal genetic resources managers of animal breeding organizations persons responsible for training in management of animal genetic resources and any other stakeholders with leading roles in designing and implementing in vivo conservation programmes for animal genetic resources Although individual breeders and livestock keepers are not the direct target audience the guidelines include background information that is relevant for all stakeholders involved in planning conservation programmes *Farm Animal Genetic Resources* Geoff Simm,2004-01-01 This book provides an overview of developments in the conservation and sustainable utilisation of Farm Animal Genetic Resources It is based on presentations given at a conference on this subject co organised by the British Society of Animal Science the Department for Environment Food and Rural Affairs the Rare Breeds Survival Trust and the Sheep Trust Advances in breeding of dairy cattle Prof. Julius van der Werf,Prof. Jennie E. Pryce,2019-12-24 Particular focus on the challenges in breeding and lack of genetic diversity in modern dairy cattle Explores ways of improving non production traits in cattle for more sustainable production Detailed review of key developments in reproductive technologies and breeding programmes to further advance dairy cattle breeding *The need to conserve farm animal genetic resources through community-based management in Africa : should policy makers be concerned?* Clemens B. A. Wollny,2001 **Animal Breeding and Genetics** Matthew L. Spangler,2022-11-01 This newly updated and revised volume of the Encyclopedia of Sustainability Science and Technology ESST details the role of Animal Breeding and Genetics in the sustainability of animal agriculture The volume covers scientific principles and applications includes the current science used to advance cattle poultry swine sheep and equine populations as well as the future role of techniques such as gene editing International leaders in the field explain foundational concepts such as heritability the covariance between relatives statistical approaches to predicting the genetic merit of individuals and the development and advancement of molecular techniques to elucidate changes in the DNA sequence that underly phenotypic variation The use of genetic based tools to improve animal agriculture and meet consumer demands across species is treated in detail Readers will gain an understanding of how global livestock producers have implemented advanced genetic selection tools and used them to improve reproduction production efficiency health and sustainability The interactions of genetics and production environments and the genetic components of the complex interactions among animals are also discussed The future of Animal Breeding and Genetics including the challenges and opportunities that exist in feeding a growing world population
