

Series 4000: Power-over-Ethernet Option Kit Installation Guide

The Power-over-Ethernet Option Kit enables you to supply power to a Series 4000 interface through the Ethernet cable that connects the interface to the network. Supplying power through the Ethernet cable eliminates the need to install an external electrical outlet or to install an AC outlet inside the interface unit and run an AC power cable to the interface.

If you supply power to the interface using Ethernet cables, you must install a backup battery to ensure that the interface remains operational if a network power outage occurs or network maintenance requires the power to be shut down. The Power-over-Ethernet Option Kit is available in two configurations, and they include a Backup Battery Option Kit, and a kit that does not include the Backup Battery Option Kit. The two kit configurations are available so that you can order the appropriate kit, depending on whether a backup battery is already installed in the interface.

Important

- Your network must use an IEEE 802.3af compliant power source to supply power to the Series 4000 interface over Ethernet lines.
- Each Series 4000 interface must be connected directly to the network hub or switch.
- The maximum length of the Ethernet cable that can connect the network hub or switch to a Series 4000 interface is 100 ft (30 m).
