Introduction

The primary mission of Blood Bank Management System is to ensure the protection of blood and efficient use of many resources contain in this process. The creation of this system is to simplify the technique of looking out for blood in case of emergency. This software help to significantly improve the quality of recording and management of information about all the donors and patients, blood collection details, blood supply details, blood stock details etc. Besides, this system will also monitor the progress of the Blood Bank.

Model

We can build our system using the iterative model. Iteratively we can add more functionality according to the feedback of Blood Bank. Some functionality can be:-

- ◆ Our system can able to create backup copies of stored data.
- ◆ We can add a feature that withdraws the registration details of donor or patient.
- ◆ Person who has the Access right can change his or her password.
- ◆ Along with the donor and patient, we can include hospitals here.
- ◆ We can add a feature that creates a "Blood Donor/Camp" Management.

Scope:

This system is not only for business purpose but also for social services. So the scopes can be:-

- ◆ This system can be used for maintaining all the process and activities of BBMS.
- ◆ Avoid accumulating blood from individuals who might also be unsuitable due to the threat of health factors that might also harm the patients.
- ◆ Through the recordings of the donors and blood details, this system can provide an efficient donor and blood stock management functions to the blood bank.
- ◆ This system can be used to manage and control the sales, purchases and stocks of blood.
- ◆ In the development of this system, there shall be the space for future modifications.

Conclusion

The aim of BBMS is to create a bridge between the demand and supply of blood. The main purpose of this BBMS is to bring the donor and the patient in a common platform. The most important view point of BBMS is for men and women who are willing to donate blood to the patients. It should encourage new donors and retain old donors to donate blood. This BBMS is designed to overcome the problems of the existing system. For every blood demand request it will improve the efficiency of data communication within the supply chain.
