

Biofinity® multifocal lens fitting guidelines

A simplified fitting philosophy

Our new fitting process is based on eye care professionals' real-world experiences.

- Fitting lower ADD powers is now simpler than ever, by using the same D lens design for both eyes.
- Fitting higher ADD powers continues to be flexible, giving you more options for exceptional vision performance.

Initial visit

Step 1 Start with a new refraction and verification of eye dominance (clipping technique).

Step 2 Select the distance prescription based on spherical equivalent, corrected for the vertex distance. Choose D or N lens design based on needed ADD power.

ADD	Dominant eye	Non-Dominant eye
+1.00	D	D
+1.50	D	D
+2.00	D	N
+2.50	D	N

Visual acuity expectations when using D and N lens combination

Lens	Distance	Near
Distance	20/20	20/20
Distance	20/20	20/40 or better
Near	20/40 or better	20/20

Step 3 Although lens will equilibrate quickly, allow patients to adapt to lenses for a minimum of 15 minutes before assessing vision. If binocular vision is unacceptable, perform a monocular over refraction, using hand-held trial lenses, to determine which eye needs improvement.

To improve distance vision add +1/-0.25D (up to +1/-0.50D) to the eye that needs improvement.

To improve near vision add +1/-0.25D (up to +1/-0.50D) to the eye that needs improvement.

Clinical Tips Prescribe maximum plus power for distance vision (Do not over-minus).

Choose the lower ADD power when possible; not necessary to overprescribe the ADD power.

Test patient's near function vision with their cell phone.

Check visual acuity without lights on.
