Threshold Concepts in Practice Ray Land, Jan H. F. Meyer, Michael T. Flanagan, 2016-07-09 Threshold Concepts in Practice brings together fifty researchers from sixteen countries and a wide variety of disciplines to analyse their teaching practice and the learning experiences of their students through the lens of the Threshold Concepts Framework In any discipline there are certain concepts the jewels in the curriculum whose acquisition is akin to passing through a portal Learners enter new conceptual and often affective territory Previously inaccessible ways of thinking or practising come into view without which they cannot progress and which offer a transformed internal view of subject landscape or even world view These conceptual gateways are integrative exposing the previously hidden interrelatedness of ideas and are irreversible However they frequently present troublesome knowledge and are often points at which students become stuck Difficulty in

understanding may leave the learner in a liminal state of transition a betwixt and between space of knowing and not knowing where understanding can approximate to a form of mimicry Learners navigating such spaces report a sense of uncertainty ambiguity paradox anxiety even chaos The liminal space may equally be one of awe and wonderment Thresholds research identifies these spaces as key transformational points crucial to the learner's development but where they can oscillate and remain for considerable periods These spaces require not only conceptual but ontological and discursive shifts This volume the fourth in a tetralogy on Threshold Concepts discusses student experiences and the curriculum interventions of their teachers in a range of disciplines and professional practices including medicine law engineering architecture and military education Cover image Detail from Eve offering the apple to Adam in the Garden of Eden and the serpent c 1520-25 Lucas Cranach the Elder 1472-1553 Bridgeman Images All rights reserved *Annual Report* University of Western Australia, 2000

Socially Just Mining Jordan Aitken, Rita Armstrong, Vicki Bilro, Andy Fourie, Kylie Macpherson, 2022-05-31 In this book we consider ways in which mining companies do and can should respect the human rights of communities affected by mining operations We examine what can and should means and to whom in a variety of mostly Peruvian contexts and how engineers engage in normative practices that may interfere with the communities best interests We hope to raise awareness of the complexity of issues at stake and begin the necessary process of critique of self and of the industry in which an engineer chooses to work This book aims to alert engineering students to the price paid not only by vulnerable communities but also by the natural environment when mining companies engage in irresponsible and often illegal mining practices If mining is to be in our future and if we are to have a future which is sustainable engineering students must learn to mine and support mining in new ways ways which are fairer more equitable and cleaner than today Web Engineering Nora Koch, Piero Fraternali, Martin Wirsing, 2004-07-14 Web engineering is a new discipline that addresses the pressing need for systematic and tool supported approaches for the development maintenance and testing of Web applications Web engineering builds upon well known and successful software engineering principles and practices adapting them to the special characteristics of Web applications Even more relevant is the enrichment with methods and techniques stemming from related areas like hypertext authoring human computer interaction content management and usability engineering The goal of the 4th International Conference on Web Engineering ICWE 2004 in line with the previous ICWE conferences was to work towards a better understanding of the issues related to Web application development Special attention was paid to emerging trends technologies and future visions to help the academic and industrial communities identify the most challenging tasks for their research and projects Following a number of successful workshops on Web engineering since 1997 at well known conferences such as ICSE and WWW the first conference on Web engineering was held in Cadiz Spain in 2001 It was followed by ICWE 2002 in Santa Fe Argentina and ICWE 2003 in Oviedo Spain In 2004 ICWE moved to the center of Europe and was held in Munich Germany from July 26 to 30 ICWE 2004 was organized by the Institute for Informatics of the Ludwig Maximilians University at LMU
