Climate, Chaos And Covid: How Mathematical Models Describe The Universe Chris Budd, 2023-03-21

Mathematical models are very much in the news now as they are used to make decisions about our response to such vital areas as COVID 19 and climate change Frequently they are blamed for a series of dubious decisions creating much concern amongst the general public However without mathematical models we would have none of the modern technology that we take for granted nor would we have modern health care be able to forecast the climate cook a potato have electricity to power our home or go into space By explaining technical mathematical concepts in a way that everyone can understand and appreciate Climate Chaos and COVID How Mathematical Models Describe the Universe sets the record straight and lifts the lid off the mystery of mathematical models It shows why they work how good they can be the advantages and disadvantages of using them and how they make the modern world possible The readers will be able to see the impact that the use of these models has on their lives and will be able to appreciate both their power and their limitations The book includes a very large number of both short and long case studies many of which are taken directly from the author's own experiences of working as a mathematical modeller in academia in industry and between the two These include COVID 19 and climate and how maths saves the whales powers our home gives us the material we need to live and takes us into space
