view of technology It suggests that technology as a whole is not a jumble of wires and metal but a living evolving organism that has its own unconscious needs and tendencies Kevin Kelly looks out through the eyes of this global technological system to discover what it wants He uses vivid examples from the past to trace technology s long course and then follows a dozen trajectories of technology into the near future to project where technology is headed This new theory of technology offers three practical lessons By listening to what technology wants we can better prepare ourselves and our children for the inevitable technologies to come By adopting the principles of pro action and engagement we can steer technologies into their best roles And by aligning ourselves with the long term imperatives of this near living system we can capture its full gifts Written in intelligent and accessible language this is a fascinating innovative and optimistic look at how humanity and technology join to produce increasing opportunities in the world and how technology can give our lives greater meaning
