1.1 – Introducing Psychology

1.1.A – Recognize how philosophical and physiological perspectives shaped the development of psychological thought.

Philosophical and physiological perspectives shaped the development of psychological thought. While psychology was not formed as a science until 1879, philosophers and scientists made connections between the mind and the body. “The science of mental life” until the 1800s.

- **Socrates** – pondered sensations and perceptions as clues to form ideas
- **Plato** – link mind and emotions to the body
- **Socrates and Plato** – mind separable from the body; continues after death; innate knowledge
- **Aristotle** – not innate; acquired through observation and experience
- **Descartes** – how immaterial mind and physical body communicate – dissected animals and concluded brain fluids communicated animal spirits through what we now call nerves to muscles
- **Spinoz** – beings seek order in chaos; patterns in randomness; confirmation bias
- **Locke** – blank slate / empiricism – observation and experimentation enable all knowledge
- **Wilhelm Wundt** – German university of Leipzig – 1879 – apparatus measuring reaction speed to sound and brightness of sound – 1/100 of a second longer, started psychological lab at LPA magazine in 1880 with O. Stanley Hall

Nature vs. Nurture Debate – Plato and Aristotle, Descartes and Locke, nature reinforced by Darwinism; contemporary: nurture works on what nature endows.

psychology – science of behavior and mental processes. **behavior** – what organisms do; mental processes – internal, subjective experiences we infer from behavior – sensations, perceptions, dreams, thoughts, beliefs, and feelings.
