Credit value:

Guided Learning hours: 60

● Aim and purpose

The aim of this unit is to ensure learners know the impact HCI has on society, economy and culture and provide the basic skills and understanding required to enable learners to design and implement human computer interfaces.

● Unit introduction

Human Computer Interaction (HCI) deals with the way people use technology. How do we give information to and receive information from computers and other digital devices? One of the biggest changes in the last 20 years has been the introduction of the graphical user interface and in many respects this has revolutionised the ways in which we interact with computers.

HCI is not confined to PCs. Consider a mobile phone or self-scan supermarket checkouts. These have carefully designed user interfaces to make them easier and faster to use. There are a number of broad definitions of HCI and these confirm that HCI is not confined to technical computing, and that the subject crosses many boundaries. It could be included in the study of philosophy, engineering, psychology, physiology, behaviour and many other areas.

The first part of this unit explores the impact of HCI on society, the economy and culture and looks at how HCI has developed and where it might be going next.

The fundamental principles involved in designing user interfaces are discussed with particular emphasis on perception, behaviour models and information processing. Specialist needs and the adaptation of interfaces to meet these varied needs will be examined.

The final part of the unit combines elements of HCI theory with learner's practical skills to enable learners to design and implement user interfaces for input and output, using a programming language of choice. Learners will evaluate interfaces and measure their effectiveness both quantitatively and qualitatively.

This unit could be combined with other units involving software development.

● Learning outcomes

On completion of this unit a learner should:

- 1 Know the impact of HCI on society, the economy and culture.
- 2 Understand the fundamental principles of interface design.
- 3 Be able to design and implement user interfaces.
