Katie Maguire is one of Ireland's best detectives. From a decades-old murder steeped in ancient legend to a terrifying gang of torturers and from mummified bodies to missing nuns, the investigations that cross Katie's desk bring new horrors each day. But there's no mystery she can't crack with her killer instinct and hunger for justice. Collected in a single volume for the first time, the eleven novels in the million-copy-selling Katie Maguire series comprising *WHITE BONES*, *BROKEN ANGELS*, *RED LIGHT TAKEN*, *FOR DEAD BLOOD SISTERS*, *BURIED LIVING*, *DEATH DEAD GIRLS*, *DANCING DEAD MEN*, *WHISTLING BEGGING TO DIE*, *THE LAST DROP OF BLOOD* , *MOVE* Michael Schumacher, Oliver Schaeffer, Michael-Marcus Vogt, 2012-11-05. Dynamic components and adaptive elements are becoming increasingly important in contemporary architecture and not just because of their visual effect. If architects and engineers are engaging more and more with the issue of movement, whether in the form of sun-tracking solar cells, lowerable walls, or intelligently programmed elevators, it's because they are busy exploring responses to three challenges: How can we control and reduce the energy requirement of buildings? How can we expand the range of possible uses? And how can we represent, illustrate, accommodate, and control dynamic movements in buildings? Designers and builders who seek to use kinetic components face technical and design challenges that aren't covered by traditional structural theory. For these users, this book presents the technical tools and constructional solutions that will allow them to implement these movements concretely and deploy them functionally within the domains of Energy, Change of Use, and Interaction. First, it lays out the fundamentals and design principles of kinetics in architecture, technology, art, and nature in a structured manner. In a third section, forty movable elements are shown in action, each on a double page with specially prepared phase drawings and organized by type of movement, including rotation, sliding, folding, and transformation. The international examples from noted architects range from window mechanisms to solar protection and light redirection systems, movable walls and roofs, and movable civil engineering structures.

Electrocatalysts for Low Temperature Fuel Cells Thandavarayan Maiyalagan, Viswanathan S. Saji, 2017-09-25. Meeting the need for a text on solutions to conditions which have so far been a drawback for this important and trend-setting technology, this monograph places special emphasis on novel alternative catalysts of low-temperature fuel cells. Comprehensive in its coverage, the text discusses not only the electrochemical, mechanistic, and material scientific background but also provides extensive chapters on the design and fabrication of electrocatalysts. A valuable resource aimed at multidisciplinary audiences in the fields of academia and industry. *Digital Human Modeling* Vincent G. Duffy, 2011-06-27. This book constitutes the refereed proceedings of the Third International Conference on Digital Human Modeling (ICDHM 2011) held in Orlando, FL, USA, in July 2011. The 58 revised papers presented were carefully reviewed and selected from numerous submissions. The papers accepted for presentation thoroughly cover the thematic area of anthropometry, applications, posture, and motion modeling, digital human modeling, and design, cognitive modeling, and driver modeling. **Driver Behaviour and Training: Volume 2** Dr. Lisa Dorn, 2017-07-05. Research on driver behaviour over the past two decades has clearly demonstrated that

the goals and motivations a driver brings to the driving task are important determinants for driver behaviour The importance of this work is underlined by statistics WHO figures show that road accidents are predicted to be the number three cause of death and injury by 2020 currently more than 20 million deaths and injuries p a The objective of this second edition and of the conference on which it is based is to describe and discuss recent advances in the study of driving behaviour and driver training It bridges the gap between practitioners in road safety and theoreticians investigating driving behaviour from a number of different perspectives and related disciplines A major focus is to consider how driver training needs to be adapted to take into account driver characteristics goals and motivations in order to raise awareness of how these may contribute to unsafe driving behaviour and to go on to promote the development of driver training courses that considers all the skills that are essential for road safety As well as setting out new approaches to driver training methodology based on many years of empirical research on driver behaviour the contributing road safety researchers and professionals consider the impact of human factors in the design of driver training as well as the traditional skills based approach Readership includes road safety researchers from a variety of different academic backgrounds senior practitioners in the field of driver training from regulatory authorities and professional driver training organizations such as the police service and private and public sector personnel who are concerned with improving road safety
